

TOKYO ELECTRON
ANNUAL
REPORT 2018

For the Year Ended March 31, 2018

Contents

Corporate Philosophy

We strive to contribute to the development of a dream-inspiring society through our leading-edge technologies and reliable service and support.

Vision

A truly global company generating high added value and profits in the semiconductor and flat panel display industries through innovative technologies and groundbreaking proactive solutions that integrate diverse technologies.

The Corporate Philosophy defines the purpose of Tokyo Electron's existence and its mission in society. It represents Tokyo Electron's basic way of thinking and forms the foundation for its corporate activities.

The Vision was established as an ideal, to which everyone in the Group can aspire, indicating how we should conduct business in order to fulfill the Corporate Philosophy.

Disclaimer

Matters discussed in this annual report, including forecasts of future business performance of Tokyo Electron, management strategies, beliefs and other statements are based on Tokyo Electron's assumptions in light of information that is currently available. These forward-looking statements involve known or unknown risks, uncertainties and other factors that could cause actual results to differ materially from those referred to in the forward-looking statements.

Factors that have a direct or indirect impact on Tokyo Electron's future performance include, but are not limited to:

- Economic circumstances in Japan and overseas, consumption trends, and large fluctuations in foreign exchange rates
- Changes in semiconductor/FPD markets
- Changes in the demand for products and services manufactured or offered by Tokyo Electron's customers, such as semiconductor manufacturers, FPD manufacturers and electronics makers
- Tokyo Electron's capabilities to continue to develop and provide products and services that respond to rapid technology innovation and changing customer needs in a timely manner

For details, please refer to Business-Related and Other Risks on page 18.

Leading the Way Forward with Innovation

To begin, we would like to express our thanks for the continued support of our investors and all of Tokyo Electron's stakeholders.

In 2017, driven by rapidly growing demand for hyperscale data centers, the wafer fab equipment market grew almost 40% year on year, surpassing US\$50 billion for the first time. In this environment, Tokyo Electron posted strong fiscal 2018 results. Net sales and net income attributable to owners of the parent both reached record highs, marking steady progress toward the targets of the medium-term management plan.

With the full-fledged arrival of the internet of things (IoT), the semiconductor and display markets are growing at an unprecedented pace. In response to expanding business opportunities, Tokyo Electron is taking an aggressive stance, targeting a world-class ROE and operating margin of 30% or higher. To reach this target, we believe that the most critical element will remain the same. As expressed in our corporate vision, we must consistently provide customers with solutions that integrate new, innovative technologies with our diverse existing process technologies. By achieving the goals of the medium-term management plan and continuing to work to sustainably improve our corporate value, we will strive to live up to the expectations of our stakeholders. We look forward to your continued support.

Tetsuo Tsuneishi

Tetsuo Tsuneishi

President & CEO

Business Overview and Financial Highlights

Semiconductor Production Equipment

- Coater/Developer
- Etch System
- Deposition System
- Cleaning System
- Wafer Prober

Sales by Region

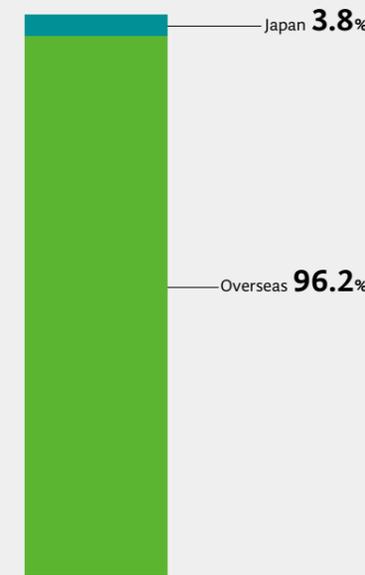

Semiconductor devices are broadly used in mobile devices, such as smartphones and tablets, as well as the data center servers that are indispensable for the processing of big data. With the arrival of the IoT, semiconductor applications will expand in all fields, from consumer electronics and automobiles to medicine and healthcare. Tokyo Electron provides a wide range of semiconductor production equipment used to manufacture such semiconductors along with superior technical support and service. The main categories of our product lineup are coater/developers, etch systems, deposition systems and cleaning systems used in wafer processing as well as wafer probers used in the wafer testing process. In addition, we also offer such products as electrochemical deposition systems and wafer bonders/debonders used in advanced packaging processes.

FPD Production Equipment

- FPD Coater/Developer
- FPD Etch/Ash System
- Inkjet Printing System for Manufacturing OLED Panels

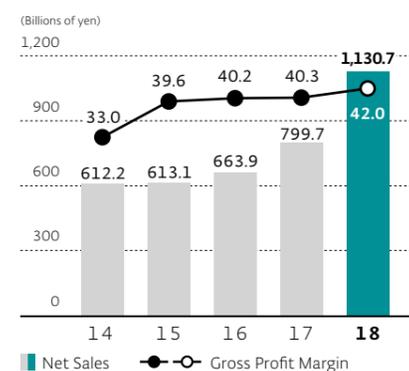

Sales by Region

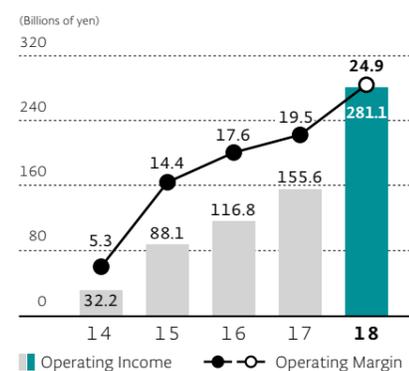

Flat panel displays (FPDs) are an essential part of everyday life, employed in such products as TVs, smartphones and tablets. Going forward, FPDs are expected to see new growth in demand for such applications as virtual reality (VR) and augmented reality (AR) head-mounted displays. Tokyo Electron supplies coater/developers and etch/ash systems for manufacturing FPDs along with solid technical support and service. We also offer an inkjet printing system for manufacturing OLED panels using large-sized substrates to take advantage of the expanding OLED display market.

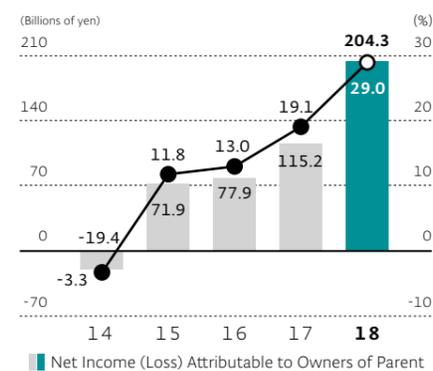

Net Sales and Gross Profit Margin

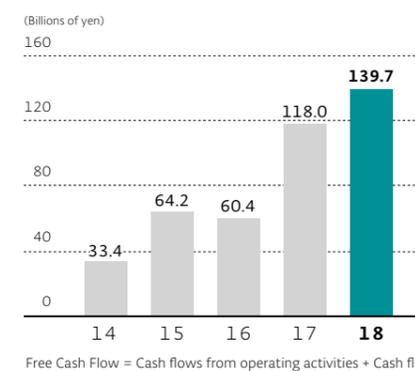

Operating Income and Operating Margin

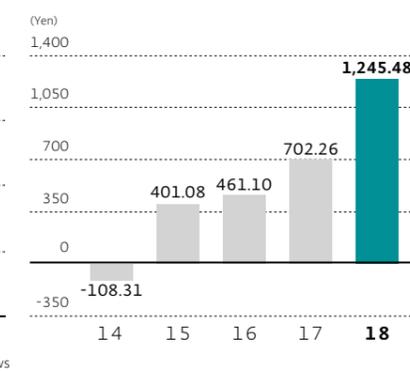

Net Income (Loss) Attributable to Owners of Parent and ROE

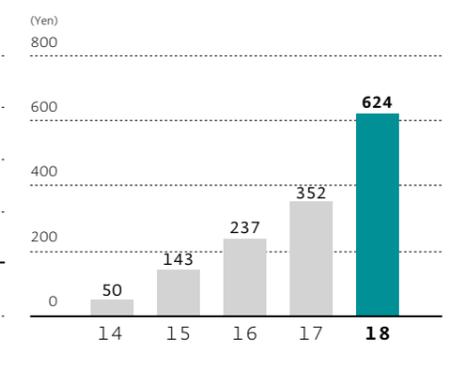

Free Cash Flow

Net Income (Loss) per Share

Cash Dividends per Share

The amounts in this report in billions, millions and thousands of yen; thousands of U.S. dollars; and thousands of shares as of and for the years ended March 31, 2016 and prior are rounded to the nearest unit. Such amounts as of and for the years ended March 31, 2017 and onward, including year-on-year differences, are truncated at the nearest unit. Accordingly, totals for the years ended March 31, 2017 and onward do not necessarily agree with the sum of the corresponding individual amounts.

Free Cash Flow = Cash flows from operating activities + Cash flows from investing activities (excluding changes in short-term investments with original maturities of less than one year)

Interview with the CEO

■ Interview with the CEO

Interview with the CEO

Setting Our Sights Even Higher

Working toward a World-Class ROE and Operating Margin

Question

01

Tokyo Electron achieved record-high profit for a second consecutive year. Could you tell us more about your progress under the medium-term management plan?

I am very pleased that we have reached record-high profit for a second consecutive year. I believe this is a result of the initiatives we've been advancing under the medium-term management plan.

Tokyo Electron aims to grow in fields where technological innovation and market growth are expected, and where we can leverage our strengths. Based

on this policy, we have already built an unassailable position in coater/developers. Furthermore, in 2015, we designated etch, deposition and cleaning as key fields. By stepping up product competitiveness, responsiveness to customers and operational efficiency, we have been striving to achieve a "Best in Class" position in the industry.

Toshiki Kawai

Toshiki Kawai
President & CEO

Interview with the CEO

Looking at the past three years, the wafer fab equipment (WFE)¹ market has seen unprecedented growth, expanding from around US\$30 billion to more than US\$50 billion. In this environment, we have built a framework for nimble, efficient development, reorganizing our development and production groups and business units, establishing the Process Integration Center, and integrating the strengths and best known method (BKM) of each product. In addition, by advancing joint development with customers, we have worked to provide high-value-added products more rapidly than ever before.

Net sales, profit margins and market share in all our key fields have increased significantly as

a result of these efforts. Moreover, sales in the field solutions business (encompassing sales of parts and used equipment, modifications and maintenance services) grew to 22% of total net sales. This was bolstered by our number of units installed—among the highest in the industry—and outstanding support capabilities. Going forward, backed by market expansion as well as our industry-leading technological prowess and highly competitive products, we will achieve even greater growth.

¹ Wafer fab equipment (WFE): The semiconductor production process is divided into front-end production, in which circuits are formed on wafers and inspected, and back-end production, in which wafers are cut into chips, assembled and inspected again. WFE refers to the production equipment used in front-end production and in wafer-level packaging production.

26.5% even if the WFE market contracts to US\$55 billion due to shifts in the semiconductor supply balance or other temporary changes.

Although we revamped the financial model, the medium-term management plan basic strategy of becoming “Best in Class” is unchanged. To connect expanding business opportunities to the greatest possible growth, we have raised our targets for capital expenditure and R&D spending and are increasing our development and production capacity. In the etch system business, we will introduce an automated warehousing system and an additional production line at our factory and begin operations at a new development building,

thereby accelerating the development of next-generation technologies. In the deposition equipment business, we are building new production buildings, increasing capacity to be ready for future demand growth. At the same time, we are working to effectively control fixed costs and the ratio of SG&A expenses to consolidated net sales. In these ways, we will achieve the targets of the new financial model as well as our medium- to long-term ROE and operating margin targets.

 For details on the medium-term management plan, please visit our website. www.tel.com/ir/policy/mplan/

New Financial Model (Fiscal 2021)

| WFE market size | US\$ 55 billion | US\$ 62 billion |
|------------------|-----------------|-----------------|
| Net sales | ¥1,500 billion | ¥1,700 billion |
| Operating margin | 26.5% | 28% |
| ROE | 30–35% | |

Question

02

What factors went into the new financial model you announced in May 2018?

With the arrival of the IoT and AI era, the semiconductor and flat panel display (FPD) industries are entering a new period of growth; in a few years, Tokyo Electron expects the WFE market to surpass US\$60 billion. We see this as an excellent growth opportunity and are aiming for world-class ROE and an operating margin of 30% or higher in the medium to long term.

The roadmap to these targets is the new financial model for fiscal 2021. The new model raises the assumed size of the WFE market to US\$62 billion and sets targets of ¥1,700 billion in net sales and a 28% operating margin. At the same time, we will build a management structure with downward cost flexibility that can secure ¥1,500 billion in net sales and an operating margin of

Interview with the CEO

Question

03

Please elaborate on the new growth phase the semiconductor and FPD industries are entering.

The world is now at the start of a fourth industrial revolution (Industry 4.0), centered on IoT and big data. As systems for analyzing and utilizing the vast amounts of data generated by network-connected “things” are created, numerous new services are expected to emerge that will change industrial structures and society itself.

The core of these new services will be data processing and analysis, namely, cloud computing and AI. Furthermore, autonomous driving, smart fabs and other services with low tolerance for data transmission delay will require edge computing, in which data is processed somewhere physically closer to the user than in conventional

cloud computing. Technological innovation in semiconductors is an absolute necessity for the development of these services. In FPDs, in addition to TVs and mobile devices, new applications like augmented reality (AR), virtual reality (VR) and flexible displays are emerging. Accordingly, improving display resolution and energy efficiency is of growing importance.

As the technological requirements of semiconductors and FPDs grow more sophisticated and their applications broaden, our customers’ needs are taking on new dimensions. We must now advance product development looking not only

to the challenges posed by next-generation technologies, but the next several generations, and work not just to enhance the performance of individual machines, but provide solutions that optimize entire production processes. Expectations are now rising for production equipment manufacturers to innovate on all fronts—from shortening lead times between R&D and mass production to creating new services using AI and big data.

 For details on the innovation driving the evolution of semiconductors, please refer to pages 9 and 10.

Question

04

As customer needs change, how will Tokyo Electron leverage its strengths?

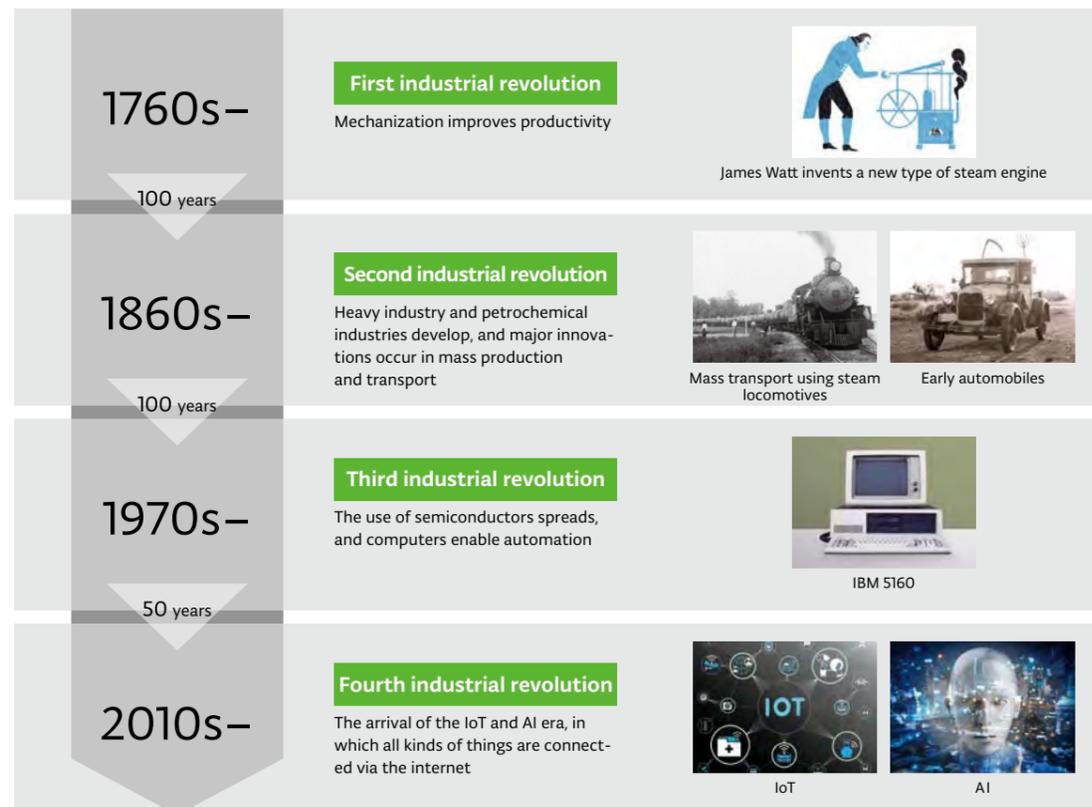

One of Tokyo Electron’s greatest strengths is that it deals in not just hardware, software, process technology or services, but all four. Leveraging this strength, we will help customers improve their entire production processes and thereby enhance their production line operations.

First, using our diverse product lineup and process technologies, we will advance joint development with customers from an early stage to quickly provide solutions that take the entire production process into account. Last year, we established the new Process Integration Center as part of these efforts, and its initiatives are already generating positive feedback.

Second, by reinforcing support at customer factories and seamlessly linking them with our R&D divisions and business units, we will help our customers shorten lead times between semiconductor device development and mass production.

Third, building on the insight and data gleaned from our installed base of 66,000 units—among the largest in the industry—we will offer new services that present high added value for customers by, for example, increasing equipment uptime and production yields.

As customers’ needs grow on multiple fronts, very few production equipment manufacturers worldwide can meet their growing expectations.

Interview with the CEO

Tokyo Electron is one of the few that can. If we leverage our innovative technological and support

capabilities, I am confident the opportunities for Tokyo Electron to grow and excel will only expand.

Question

05

Please tell us about Tokyo Electron's sustainability initiatives.

Employees are the source of sustainable corporate value creation and growth. Since I was appointed CEO, I have sought to ensure that Tokyo Electron enriches the lives of its employees and their families. To ensure that every employee is highly motivated and to secure outstanding people, we have introduced a new global human resources system and continue working to make job responsibilities clearer and evaluations fairer. Furthermore, we have adopted an incentive plan linked to medium-term performance as part of efforts to enable employees and management to work as one toward increasing corporate value. I have also visited factories and overseas Group companies to speak with our people there, actively seeking to deepen engagement with front-line employees. I am confident that these initiatives to bring out the very best performance in each employee will contribute to sustainable growth.

In addition, as the social responsibilities incumbent on companies increase, we hope to draw inspiration from the United Nations' Sustainable Development Goals (SDGs) and other standards to step up our ESG initiatives. Seeking to enhance governance efficacy, we have brought in a new outside director and are discussing long-term strategy from diverse viewpoints. Turning to the environment, in addition to reducing the environmental footprint of our own products, we are advancing initiatives to help reduce the power consumption of the semiconductor devices manufactured using our products.

Through such measures, we aim to ensure that Tokyo Electron is highly sustainable and fulfills its corporate social responsibilities.

 For details on Tokyo Electron's ESG-related initiatives, please refer to pages 11–14 and our Sustainability Report 2018.

Question

06

What is your approach to using cash on hand?

Our greatest priority for cash on hand is investment in growth aimed at the ongoing creation of innovative technologies. We will focus on areas where we can effectively utilize Tokyo Electron's technologies and strengths and expect future market growth. Furthermore, we will put increased effort into R&D related to promising core technologies to maximize their potential.

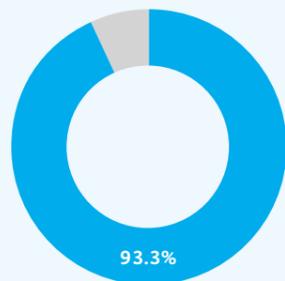

Turning to shareholder returns, we have adopted a performance-linked dividend scheme and

set a target dividend payout ratio of 50%. For fiscal 2018, we paid an annual per-share dividend of ¥624, marking a record high for a fourth consecutive year. We will flexibly consider stock repurchases, taking a comprehensive view of such factors as investment needed for growth, cash on hand and the macroeconomic environment. Going forward, we will continue to strive to sustainably increase corporate value and maximize shareholder value through profit growth.

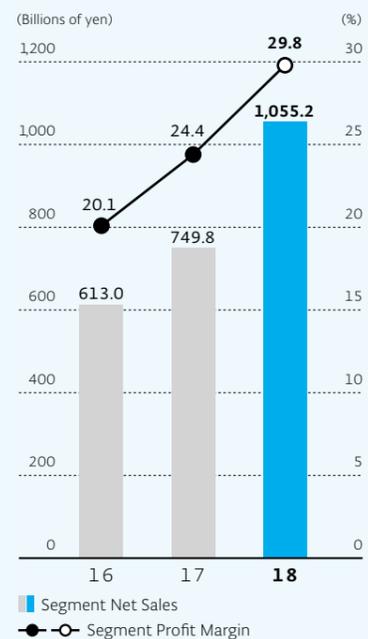

Review of Operations and Business Outlook

Semiconductor Production Equipment (SPE)

Share of Net Sales

Net Sales and Profit Margin by Segment

Segment profit corresponds to income before income taxes on the consolidated statements of income.

2017 Business Environment

Investment in data center servers was brisk, backed by growing transmission volumes due in part to the spread of streaming video and other services. Supply of DRAM was especially tight, and in 3D NAND,¹ the use of SSD² in servers also grew. These factors led to major increases in capital investment aimed at expanding production. As a result, 2017 global capital expenditure for wafer fab equipment (WFE)³ grew 37% year on year to surpass US\$50 billion for the first time.

1 3D NAND: A new type of non-volatile memory in which memory cells are stacked vertically
 2 SSD (Solid state drive): A high-volume data storage device that uses non-volatile memory
 3 Wafer fab equipment (WFE): The semiconductor production process is divided into front-end production, in which circuits are formed on wafers and inspected, and back-end production, in which wafers are cut into chips, assembled and inspected again. WFE refers to the production equipment used in front-end production and in wafer-level packaging production.

Fiscal 2018 Business Overview

- ▶ Segment net sales grew 40.7% year on year to ¥1,055.2 billion.
 - By application, sales of equipment for DRAM and non-volatile memory more than doubled year on year.
 - By product, investment in 3D NAND and multiple patterning, reflecting ongoing miniaturization, increased. Tokyo Electron's market share rose, leading to sales growth in the key fields of etch, deposition and cleaning. Sales of etch systems rose to 40% of the segment's total new equipment sales.
 - Sales in the field solutions business (encompassing sales of parts and used equipment, modifications and maintenance services) rose 20.5% year on year to ¥251.0 billion due to significant growth in parts sales, mainly in South Korea, reflecting higher equipment utilization rates at customer facilities.
- ▶ The segment profit margin improved significantly, from 24.4% in the previous fiscal year to 29.8%, due in part to the increase in sales as well as a rise in the competitiveness of products in key fields.

Business Outlook

With the full-scale arrival of IoT, the use of data centers with high-speed processing and services that leverage big data is rapidly expanding. This expansion relies on semiconductors and is driving a boom in semiconductor demand. Reflecting this demand, the WFE market is expected to grow to over US\$60 billion in the near future. Tokyo Electron has positioned etch, deposition and cleaning systems as key medium-term growth fields, which are expected to see especially strong market expansion. By achieving technological differentiation in these fields, the Company aims to increase its profitability and market share.

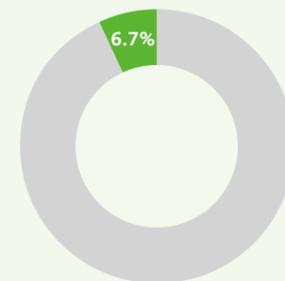

As the number of layers in 3D NAND increases and the miniaturization of DRAM and logic chips continues, device structure is growing more complex and a wider range of materials is being used. To fabricate such devices, deposition technologies that form uniform films from a broad range of materials and etch and cleaning technologies that selectively and precisely remove such films are becoming more important than ever. Tokyo Electron is working to expand its market share in its three key fields by leveraging such strengths as its deep hole etch technologies for high aspect ratio features, surface modification and drying technologies that prevent pattern collapse caused by cleaning chemicals, and ALD/quasi-ALE⁴ technologies that enable atomic level film formation and removal.

The advance of new technological generations will lead to even more formidable and complex technological challenges going forward. Tokyo Electron will leverage its lineup of equipment for a diverse range of processes to quickly develop and offer integration technologies that optimize multiple processes to one another. By taking part in joint development with customers from an early stage according to their respective technological roadmaps, the Company will advance business growth from a long-term perspective.

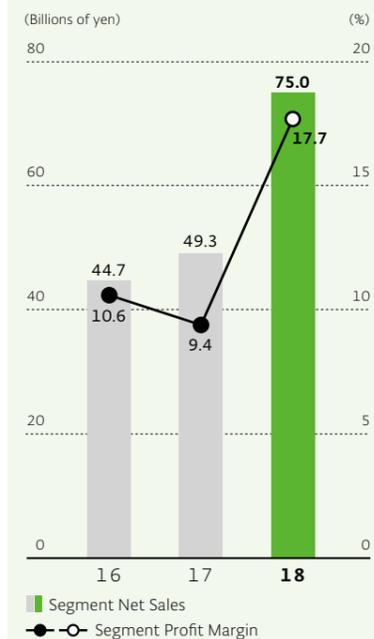

4 ALD (atomic layer deposition)/quasi-ALE (atomic layer etch): Atomic level film deposition and etch techniques

FPD Production Equipment

Share of Net Sales

Net Sales and Profit Margin by Segment

Segment profit corresponds to income before income taxes on the consolidated statements of income.

2017 Business Environment

Investment in small- and medium-sized OLED panels for smartphones and other mobile devices was brisk. At the same time, investment in generation 10.5 large panels for TVs began. As a result, the equipment market for thin-film transistor (TFT) array processes,¹ in which Tokyo Electron operates, grew about 30% from the previous year, reaching approximately US\$10 billion.

1 Thin-film transistor (TFT) array processes: The processes of manufacturing the substrates with the electric circuit functions that drive displays

Fiscal 2018 Business Overview

- ▶ Segment net sales rose 52.0% year on year to ¥75.0 billion.
- ▶ The segment profit margin rose significantly, from 9.4% in the previous fiscal year to 17.7%.
 - Customers continued to transition to highly profitable PICP™² etch systems for small- and medium-sized panels.
 - Tokyo Electron used its track record in generation 10 panels to secure a large share of the market for generation 10.5 large-sized panel equipment.

2 PICP™: A plasma source that produces extremely uniform high-density plasma on panel substrates

Business Outlook

In the display market, technological innovation is expected in both products for mobile devices and for TVs. Accordingly, the market for TFT array process equipment, in which Tokyo Electron operates, is expected to remain firm through 2020. Within this overall market, Tokyo Electron aims to improve profitability and market share by leveraging its technological superiority.

In small- and medium-size panels for mobile devices, increases in display size are expected to drive continued expansion in panel area-basis demand. Despite undergoing recent market adjustments, demand for OLED is forecast to grow over the medium term, as it offers excellent performance (e.g. high resolution and low power consumption) and enables flexible displays. OLED production, however, requires more difficult etching and lengthier processes. In addition, new etch processes are emerging for flexible display production. In addition to PICP™ etch systems, which offer excellent processing uniformity, Tokyo Electron is working toward business growth by introducing Betelex™, a new platform with higher productivity, and equipment for new processes.

Looking at large-sized panels for TVs, investment in generation 10.5 panels for 65-inch TVs has begun. Building on its track record of providing equipment for the mass production of generation 10 panels, Tokyo Electron is already securing business in this area and aims to flex its competitive strengths to win other customers' planned investment going forward. In addition, as Tokyo Electron's PICP™ etch systems currently boast overwhelming competitiveness for small- and medium-sized panels, we are beginning to roll out these systems for large-sized panels in preparation for investment in high-resolution 4K and 8K displays.

Furthermore, Tokyo Electron is well positioned to take advantage of the coming widespread adoption of OLED TVs. The Company's inkjet printing system offers drastically improved material efficiency compared with conventional evaporation systems. To build a robust position as the inkjet equipment market takes shape, Tokyo Electron is readying its business framework in this area with the delivery of systems to customers' development lines.

Innovation Drives the Evolution of Semiconductors

Semiconductor Production —A History of Innovation

In 1965, Dr. Gordon Moore, one of Intel's founders, made a prescient observation that eventually became Moore's Law. Six years later, Intel released the world's first commercial microprocessor, the Intel 4004. Over the following half century, through repeated technological innovation, semiconductor performance has continued to improve, with steadily higher circuit density realizing improved performance, such as increased capacity, speed and power efficiency.

Figure 1 illustrates the evolution of logic devices since 2000. In early planar poly-gates, strained silicon technology was introduced to improve channel mobility. Later, high-k¹/metal gate technologies were introduced to reduce current leakage that arose due to miniaturization. To enhance pattern fidelity, circuit design transitioned from 2D layouts to combinations of simpler 1D layouts (Figure 2). As miniaturization continued beyond 45 nm, multiple patterning technologies were developed to compensate for the limits of lithography resolution, and FinFET structures were adopted to reduce short-channel effects. Going forward, with the advent of 5-nm technology and beyond, logic devices are expected to evolve into nanowire structures. In memory devices, the use of capacitors and transistors with 3D structures in DRAM have driven continued miniaturization, and the switch from planar NAND flash memory to 3D NAND has sidestepped the

limits of miniaturization (Figure 3).

Through the combination of new designs and materials and the creation of new production methods, semiconductors have continued to evolve. Today, production technology is approaching the physical limits of miniaturization, at the atomic level. The world's first commercial microprocessor, manufactured with 10-micron technology, contained approximately 2,300 transistors per chip. In contrast, the latest mass-produced chips—products of 14-nm technology—boast well over a billion transistors per chip. The gate length on these chips is approximately 20 nm, and the width of the fins (the channels) is just 8 nm. Going forward, each successive technology node will entail miniaturization by a few nanometers, or the size of ten or so atoms. Manufacturing such devices will require atomic-level control.

¹ High-k: High dielectric constant film

Technological Barriers to Miniaturization

Miniaturization in semiconductor production is now facing new hurdles. The first of these is photolithography resolution, a challenge that has emerged in recent years. Until now, miniaturization has advanced by using shorter wavelength light sources in exposure equipment to increase resolution. Today, however, the shortest wavelength available for use in mass production is 193 nm, more than 20 times the width

the aforementioned fins. The use of immersion lithography technology, in which exposure is conducted in a liquid medium with a high refractive index, helps to improve resolution, but even this is insufficient to achieve the desired results.

On top of this, aligning photomasks and wafers during patterning is also a challenge. In the latest logic and DRAM devices, transistors and other logic circuit elements are not only small, but arranged in complex configurations. If exposure alignment is off by a distance of just ten or so atoms, the densely arranged circuit elements will be interconnected inaccurately, leading to declines in processing precision.

Furthermore, at high-volume manufacturing sites, noise that always has a certain probability of occurring is becoming a more pronounced issue. The errors caused by such noise might not be problematic when lithography and etch processes are conducted just once. However, when lithography and etch processes are conducted multiple times on the same layer, these errors accumulate, leading to reduced yield. As miniaturization advances, these three challenges are expected to become even more serious. Solving them will be crucial to advancing to the 5-nm technology node and beyond.

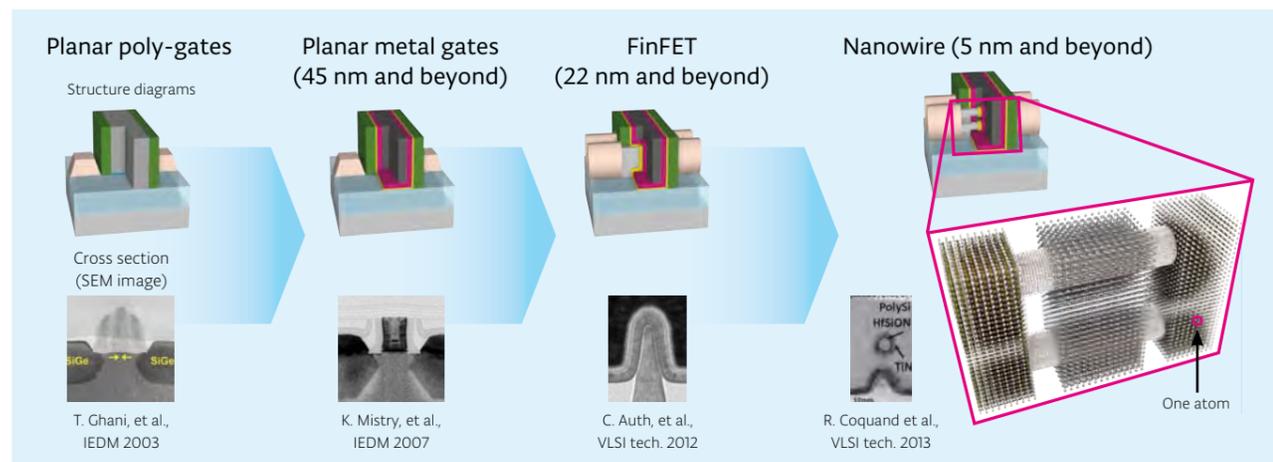

Breakthroughs in Production Technology

To solve these challenges, a number of breakthrough production technologies are beginning to emerge.

A well-known example, which is already widely used in mass production, is multiple patterning technology. This approach uses process technologies—such as deposition, lithography, etch and cleaning—to supplement the resolution of exposure equipment. Patterns with several times the density achievable by the lithography resolution can now be formed by employing the litho-etch method, in which lithography and etch processes are performed repeatedly, or self-aligned patterning, in which repeated deposition and etch processes are performed after lithography. These technologies are expected to see continued application in coming technology nodes. In addition, technology known as self-aligned block (SAB), which increases tolerance for placement variance in lithography, is currently being developed. By taking advantage of differences in etch selectivity by material, this technology is expected to enable the processing only of the desired materials without the need for improved performance from exposure equipment.

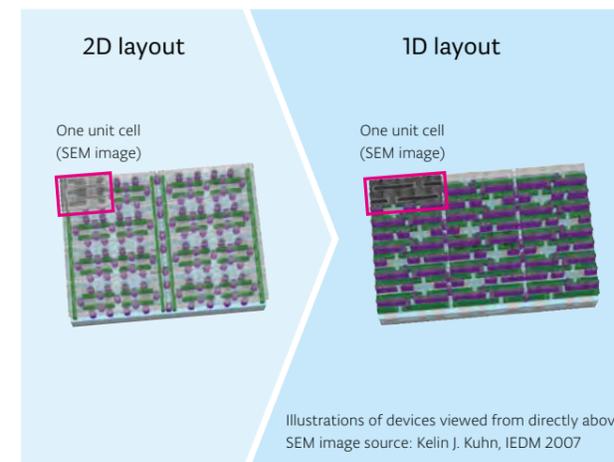

To realize these patterning technologies, the further refinement of production technologies for each unit process is indispensable. These include atomic layer etch (ALE) and atomic layer deposition (ALD), which control etching and deposition at the atomic level (Figure 4), as well as drying technologies to prevent pattern collapse caused by cleaning chemicals. In addition, the unit processes that give the best performance individually do not always achieve the highest yields when combined. This means that integration technology, aimed at optimizing unit processes to one

Figure 1. The Evolution of Logic Device Transistor Structures

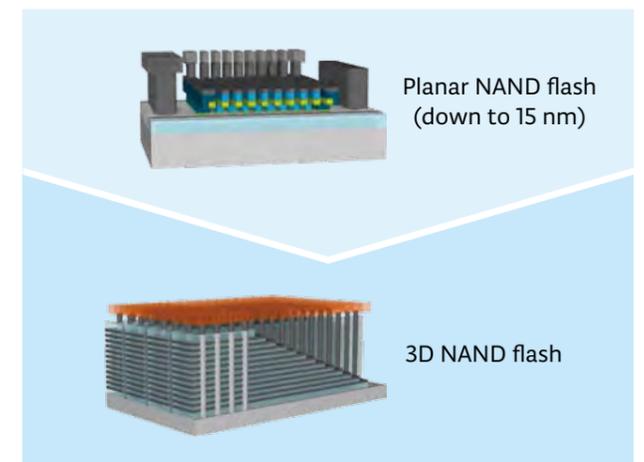

Devices evolved through changes in transistor materials and structure. Manufacturing requires atomic-level production technology.

Figure 2. The Evolution of Logic Device Circuit Design

Miniaturization continued by changing to simpler, 1D layouts.

Figure 3. The Evolution of NAND Flash Memory

The method of increasing density changed from planar miniaturization to vertical stacking.

Innovation Drives the Evolution of Semiconductors

another, will only grow more important. Tokyo Electron provides equipment for a wide range of processes. Leveraging this strength, we are beginning to aggressively develop and offer integration technology solutions.

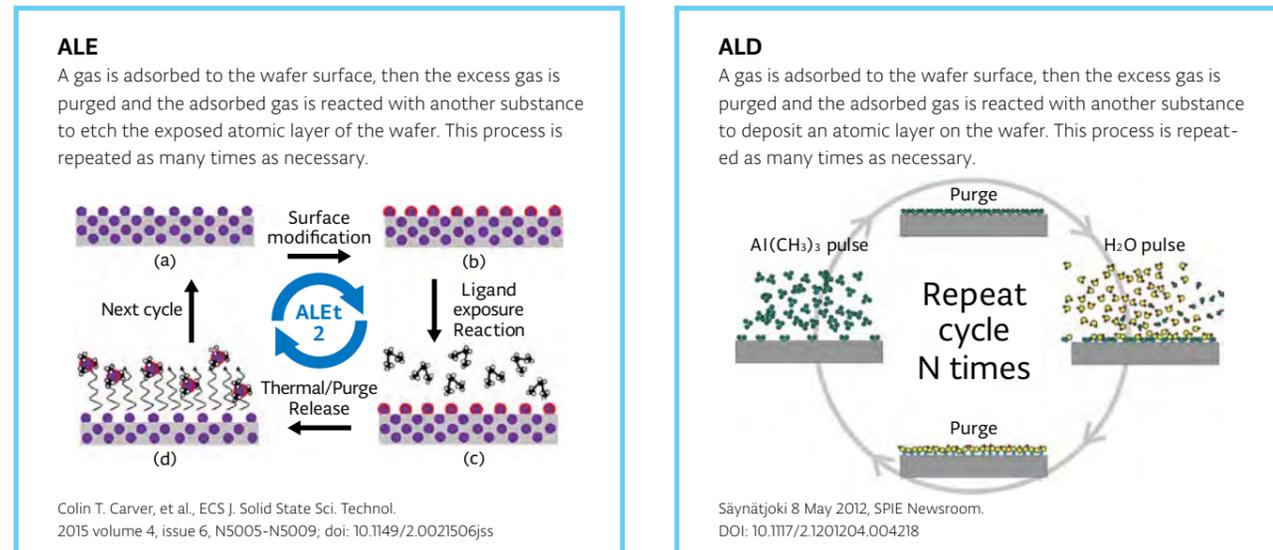

In addition to patterning technologies, EUV, a new type of light source for lithographic exposure, is approaching commercialization. In particular, the use of EUV in litho-etch processes (as explained above) is expected to reduce the

number of masks needed per layer, reducing placement error and thereby increasing yields (Figure 5). Tokyo Electron is working with exposure equipment suppliers, consortia and other partners to develop coater/developers for EUV lithography. We report our progress every year at SPIE Advanced Lithography, the world's largest lithography conference, as we strive toward the adoption of EUV in mass production in the semiconductor industry. The combination of patterning technologies and EUV is now pushing miniaturization toward the 5-nm technology node and beyond.

excel in performing complex calculations on large volumes of information and are expected to be adopted in data center servers and similar electronics.

These new devices can only be commercialized through the application of existing semiconductor production technologies. Tokyo Electron is focusing not just on ways to continue miniaturization, but also on the technologies that will be required for continued evolution over the long term. In addition to our independent R&D initiatives, we are beginning to build an ecosystem for collaboration with consortia, academia and other equipment and material suppliers around the world. By creating new production technologies, Tokyo Electron will contribute to the continued evolution of semiconductors.

Figure 4: Atomic Layer Etch (ALE) and Atomic Layer Deposition (ALD)

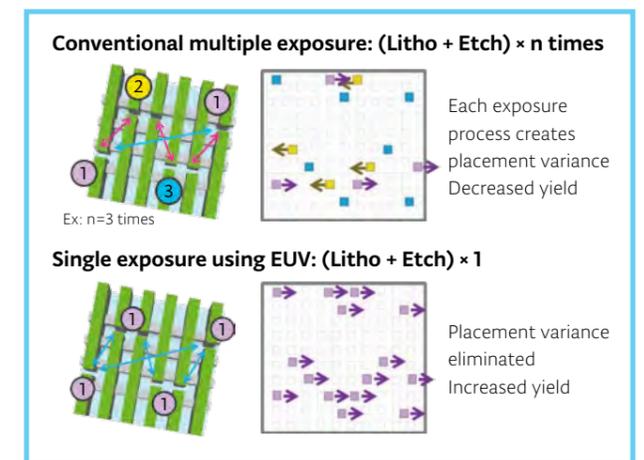

Beyond Miniaturization

Having reached the atomic level, semiconductor miniaturization is gradually approaching its physical limits. Nevertheless, semiconductor performance will continue to improve. Going forward, technological innovation will continue to advance in forms other than miniaturization.

In memory devices, ferroelectric memory (FeRAM) has been seen as a promising new type of memory since research on scalable ferroelectric materials was published in 2011.² In logic devices, research has begun into neuromorphic computers that employ new architectures known as non-von Neumann as well as quantum computers, which utilize quantum-mechanical phenomena. Neuromorphic computers require less energy to send electric signals than conventional devices. Because of this property, they are expected to reduce the power consumption of devices and be particularly suited to wearables and small IoT-related electronics. Quantum computers

Figure 5. The Advantages of EUV Lithography in Litho-Etch Multiple Patterning Processes

Column 01

Types of Multiple Patterning Technology

Multiple patterning technologies are broadly divided into litho-etch methods, in which lithography and etch processes are performed repeatedly on the same layer, and self-aligned patterning methods, in which repeated deposition and etch processes are performed after lithography. Litho-etch methods enable patterning density equivalent to that achievable based on the resolution of the lithography equipment multiplied by the number of litho-etch repetitions. This approach is well suited for reducing the pitch (the distance between features) of masks, such as those for forming

contacts to connect transistors and wiring, vias to bridge the spaces between wiring, cuts to break lines formed by self-aligned multiple patterning, and blocks to fill spaces. Self-aligned multiple patterning, meanwhile, is useful for reducing the pitch of periodic line-space patterns. These techniques achieve patterning equivalent to twice the lithography resolution when performed once, and four times the lithography resolution when performed twice, which is why these approaches are referred to as double patterning (SADP) and quadruple patterning (SAQP), respectively.

Litho-etch multiple patterning: Limited use of etch and deposition

Self-aligned multiple patterning (SAMP): Performing etch/deposition numerous times

Column 02

Neuromorphic Computers

Neuromorphic computers are made by building chips that contain circuits that mimic human brain cells—neurons. When trained, these artificial neurons create synapses as they connect to one another, eventually forming a neural network. Compared with conventional semiconductor devices, such chips are expected to be more energy efficient. Moreover, if one neuron fails, its operation can instead be performed by another of the many neurons on the chip, making these chips highly reliable.

Conceptual illustration of a neural network

Message from the Chairman of the Board

Pursuing Effective Governance to Increase Shareholder Value

Since the publication of Japan's Corporate Governance Code and the Ito Review, interest has been steadily rising in such topics as board composition and management effectiveness. Corporate governance is the foundation for realizing Tokyo Electron's goal of increasing corporate value over the short, medium and long terms. Since Tokyo Electron's initial listing on the Tokyo Stock Exchange in 1980, informed by Japanese and global standards, we have constantly pursued excellence in corporate governance.

Tokyo Electron uses the Audit & Supervisory Board System. This enables both quick decision making leveraging the insight of our executive directors and effective oversight provided by our non-executive directors, outside directors and the Audit & Supervisory Board. In this way, we achieve a healthy balance of aggressive management and careful supervision in corporate governance.

New initiatives in fiscal 2018, the year ended March 31, 2018, included setting up a meeting to discuss Tokyo Electron's medium- to long-term growth strategies to complement the regular meetings of the Board of Directors. At this meeting, internal and external directors and Audit & Supervisory Board members engaged in vigorous discussion. Furthermore, we welcomed a new outside director in June 2018, bringing the total number of outside directors and Audit & Supervisory Board members to six and further increasing the diversity of the Board of Directors. The new outside director, Mr. Michio Sasaki, brings insight and management experience at Keyence, a corporation well known for being highly profitable, and I am sure he will contribute greatly at Tokyo Electron. Through such efforts to deepen and bring additional perspectives to the discussions held at Board of Directors meetings, we hope to continue to enhance the Board's effectiveness. In addition, to solidify the Company's foundation for growth, we have strengthened our efforts to develop future leaders. Our Human Resource Department and the Nomination Committee jointly formulate succession plans for the CEO and ranking executive officers, while the Board of Directors oversees the implementation and examination of such plans.

To grow sustainably in the semiconductor and electronics industries, it is essential to rapidly develop innovative technologies and high-value-added products and to offer these to customers alongside high-quality service. The production equipment market is approaching a new growth phase, reflecting the increased use of IoT technologies and big data. As the chairman of the Board of Directors, I will continue working to build an effective corporate governance system and ensure the Board operates effectively in order to further enhance shareholder value.

Tetsuo Tsuneishi
Chairman of the Board

Corporate Governance

Basic Stance

In an environment where over 80% of our sales come from overseas, Tokyo Electron regards maintaining governance as essential to becoming a truly global company that achieves sustainable growth.

To that end, Tokyo Electron strives to build frameworks to maximize the use of its worldwide resources. In addition to strengthening its management platform and technology base, the Company maintains a governance structure that will enable it to attain world-class profitability.

Tokyo Electron uses the Audit & Supervisory Board System, which consists of a Board of Directors and an Audit & Supervisory Board. Effective governance is achieved based on the supervision of management by the Audit & Supervisory Board.

Board of Directors

Roles and Responsibilities of the Board of Directors

The Board of Directors works to achieve sustainable growth and increase corporate value over the medium to long term based on its fiduciary responsibility to shareholders. The roles and responsibilities of the Board of Directors are as follows:

- (1) Establishing management strategy and vision
- (2) Making major operational decisions based on strategic direction
- (3) Engaging in constructive, open-minded debate

The Board of Directors seeks the active participation of those present in discussions in order to obtain a wide range of opinions, and supervises management and operational execution based on active debate.

The Board of Directors respects minority or opposing viewpoints, including opinions voiced by outside directors; revises the conditions for implementation or the content of proposals as necessary; and engages in extensive debate with the goal of reaching decisions based on consensus. However, emphasis is placed on making necessary decisions quickly to avoid missing opportunities.

Board Size and Independent Outside Directors

Tokyo Electron considers it essential to maintain a Board of Directors with the appropriate size to ensure high quality, active debate and the diversity expected of both executive directors and independent directors. The current Board of Directors consists of 12 directors, and Tokyo Electron believes this to be the appropriate size, at present, to achieve a good balance in terms of knowledge, experience and skills.

Tokyo Electron regards the active expression of opinions, not only by independent directors, but also by Audit & Supervisory Board members, as the cornerstone that supports the sound decision making of the Board of Directors. Currently, six out of the 17 participants in the Board of Directors meetings, including the Audit & Supervisory Board members, are outside members, consisting of three independent directors and three outside Audit & Supervisory Board members.

Tokyo Electron believes that the current Board of Directors meetings achieve an appropriate sense of productive tension and constructive debate due to the combined presence of executive directors, essential for making operational decisions, and outside members, who provide objectivity.

Nominations for Director and CEO

Tokyo Electron has established a Nomination Committee to ensure fairness and efficacy in management. The Nomination Committee proposes director candidates to the Board of Directors prior to their election at the General Meeting of Shareholders and also nominates CEO candidates for appointment by the Board of Directors. The Nomination Committee is composed of four directors and Audit & Supervisory Board members, including at least one outside Audit & Supervisory Board member; the CEO is not a member of the committee. The authority to propose the election or dismissal of the CEO or directors is entrusted to the Nomination Committee.

Director and CEO Compensation

Tokyo Electron's compensation policy prioritizes the following considerations.

- (1) Globally competitive composition and levels of compensation
- (2) Correspondence with short-term performance, sustainable growth and medium- and long-term increases in corporate value
- (3) Assuring management transparency and fairness as well as the appropriateness of compensation

In line with this policy, Tokyo Electron has adopted a director and executive officer compensation system that is closely linked to performance and shareholder value. The compensation of directors currently comprises a fixed basic wage and an annual performance-linked bonus. However, to realize further growth by better linking director compensation to medium-term corporate performance, Tokyo Electron has introduced a new, medium-term performance-linked compensation scheme from the year ending March 31, 2019.

To ensure management transparency and fairness as well as the appropriateness of compensation, Tokyo Electron maintains a Compensation Committee, which comprises three or more directors and includes at least one outside director. The Compensation Committee conducts an analysis of industry compensation levels and systems in and outside

Japan. Based on this analysis, the committee proposes a policy and system for the compensation of the Board of Directors and executive officers as well as individual compensation amounts for the representative directors.

In order to better link factors that increase corporate value and shareholder value to compensation, Tokyo Electron has designated the net income attributable to owners of the parent and return on equity (ROE) for the current period as the main calculation benchmarks in the annual performance-linked compensation system for the CEO and other directors. These are adjusted, as necessary, for extraordinary income/losses and other special factors.

In principle, annual performance-linked compensation consists of monetary compensation and share-based compensation (stock options); the ratio of these two components is roughly 1:1 for directors, and single year performance is appropriately reflected in the performance-linked compensation of the CEO and other directors. Share-based compensation is awarded in the form of stock options with the exercise price set at one yen per share, and a three-year vesting period from the date of allotment before the options may be exercised.

The medium-term performance-linked compensation comprises share-based compensation (performance shares) and is aimed at using shareholdings to align the perspectives of directors with those of shareholders and incentivize directors to increase corporate value. Medium-term performance-linked compensation is based on reference amounts calculated based on each director's position and duties. Compensation payouts vary from 0% to 150% of said reference amounts according to the attainment level of performance targets over the relevant three-year term. The operating margin, ROE and other performance indicators are used to appropriately link medium-term enhancement of corporate value with director compensation amounts.

Evaluation of the Effectiveness of the Board of Directors

Each year, based on a question-based evaluation survey filled out by the Board of Directors and Audit & Supervisory Board members, the Board of the Directors analyzes and evaluates its own effectiveness through discussions, mainly involving the outside directors and outside Audit & Supervisory Board members, as well as separate discussions involving the entire Board of Directors. The board then discloses a summary of the results.

Does Tokyo Electron have these major components of corporate governance?

(As of July 1, 2018)

| | | |
|---|-----|---|
| Compensation Committee | Yes | Composed of directors, including outside directors and excluding representative directors, or Audit & Supervisory Board members |
| Nomination Committee | Yes | Composed of directors, excluding the CEO, or Audit & Supervisory Board members |
| Outside directors | Yes | Three of the 12 directors are outside directors |
| Outside Audit & Supervisory Board members | Yes | Three of the five Audit & Supervisory Board members are outside Audit & Supervisory Board members |
| Executive officer system | Yes | |
| Disclosure of individual remuneration of representative directors | Yes | Disclosed since 1999 |
| Annual performance-linked compensation system | Yes | |
| Medium-term performance-linked compensation scheme | Yes | Adopted in 2018 |
| Stock options system | Yes | Does not apply to outside directors and Audit & Supervisory Board members |
| Retirement allowance system for executives | No | |
| Anti-takeover measures | No | |

Corporate Governance

At meetings of the Board of Directors, directors and Audit & Supervisory Board members actively engage in discussion based on their diverse viewpoints and experiences. Important items are examined in terms of risk, openly debated and considered carefully. In fiscal 2018, to complement Board of Directors meetings, Tokyo Electron held an off-site meeting focused on operational strategy and vision. Turning to the Board's internal committees, the Nomination Committee reported on initiatives based on succession plans, and the Compensation Committee made proposals to better link compensation with medium-term performance. Tokyo Electron thus believes that its Board of Directors is appropriately carrying out its role as defined in the Corporate Governance Guidelines, namely (1) Establishing management strategy and vision and (2) Making major operational decisions based on strategic direction. Accordingly, Tokyo Electron believes that the Board of Directors, including the Nomination Committee and Compensation Committee, is functioning effectively.

Going forward, to deepen its discussions of Tokyo Electron's medium- and long-term vision and growth strategy, in addition to items for resolution and reports, the Board of Directors will continue working to enrich the items brought up for discussion at its meetings. Furthermore, by providing ample opportunities for discussion and debate in which outside directors and outside Audit & Supervisory Board

members are the main participants, Tokyo Electron will strive to ensure appropriate, meaningful decision making based on highly diverse views. In addition, the Board of Directors will continue to consider its composition, including the ratio of outside members and diversity, such as that of gender and nationality.

Audit & Supervisory Board

The Audit & Supervisory Board currently consists of five members and includes three outside Audit & Supervisory Board members. Two members are full-time. The full-time Audit & Supervisory Board members collect information through onsite surveys, and the board maintains appropriate coordination with the Internal Audit Department and the independent auditors as part of a structure that enables Audit & Supervisory Board members to obtain all information necessary for audits.

Moreover, the composition of Audit & Supervisory Board members provides a good balance of knowledge required for operational audits and accounting audits, including financial and accounting knowledge, legal knowledge, and audit experience at other companies. Tokyo Electron thus believes its Audit & Supervisory Board members are able to perform their auditing functions effectively.

Internal Control System and Risk Management

Basic Stance

In order to enhance the Tokyo Electron Group's corporate value and remain accountable for our actions to our stakeholders, we are making efforts to strengthen effective internal control. This involves implementing practical measures that are in line with the Fundamental Policies concerning Internal Controls within the Tokyo Electron Group, set out by Tokyo Electron's Board of Directors. We also annually evaluate our internal control over financial reporting based on the Financial Instruments and Exchange Act of Japan.

Risk Management System

To more effectively strengthen the internal control and risk management systems of the entire Group, Tokyo Electron has established a dedicated risk management unit within the General Affairs Department of the corporate headquarters. This unit analyzes the risks faced by the Group and identifies material risks. It then monitors the management of such risks while supporting and implementing risk management activities. The unit also regularly reports the status of risk management activities to the Audit & Supervisory Board members and the Board of Directors.

In fiscal 2018, the Group reassessed the material risks in its operating environment. For each risk determined to be material, the status of risk management at the responsible divisions was reconfirmed. Going forward, the Group will continue these initiatives to enhance the efficacy of its risk management framework.

Auditing by the Internal Audit Department

The Global Audit Center of the corporate headquarters is the Group's internal audit department. This Center is responsible for auditing business activities, compliance and systems at domestic and overseas Group companies and business units (BUs) in accordance with each fiscal year's auditing plan. In addition, the Group's internal control over financial reporting based on the Financial Instruments and Exchange Act of Japan was evaluated as effective by the independent auditors in fiscal 2018.

At operating divisions where issues have been identified through audits and assessments, the Global Audit Center monitors progress and provides necessary guidance for improvement.

Business Continuity Plans (BCPs)

The Tokyo Electron Group began building business continuity plans in 2003. After the Great East Japan Earthquake, the Group completely reworked these plans to be more effective and include provisions for restoring operations after crises, focusing on major business sites. As examples of specific initiatives, the Group has put considerable effort into such preparations for disasters as stockpiling emergency supplies (including food and drinking water), reinforcing essential infrastructure, rebuilding the safety confirmation system, creating manuals, and implementing drills and employee training. Furthermore, to meet its responsibilities as an equipment manufacturer, the Group pursues ongoing efforts to improve its BCPs, including taking steps to facilitate early recovery and alternate production.

When the Kumamoto Earthquake struck in April 2016, the Group was able to respond with speed and precision based on the BCP it had prepared. In addition, since fiscal 2018, the Group has been advancing seismic reinforcement construction at its major business sites.

Information Security Management

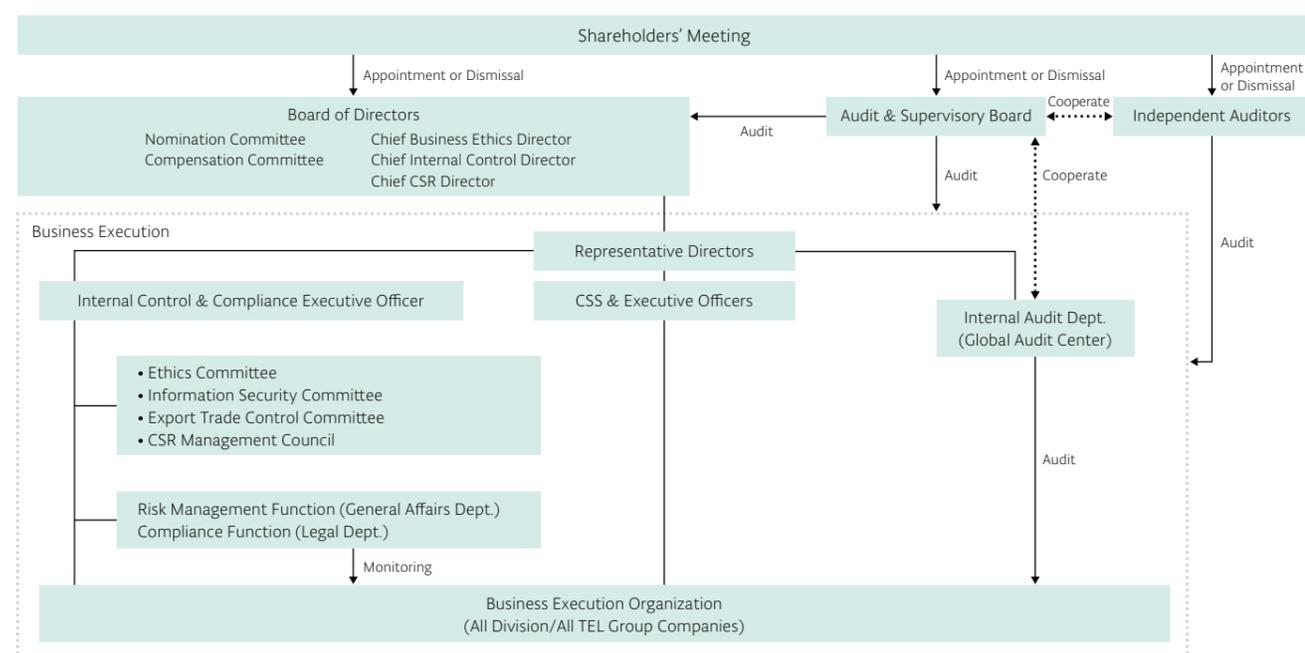

To ensure the appropriate management of information assets, the Group has an information management framework centered on its Information Security Committee, which is composed of representatives from departments across the Group.

Rules concerning the handling and protection of such sensitive information as trade secrets and personal information are formulated based on the Information Security Committee's policy and applied throughout the Group. An e-learning system is used to educate and promote awareness of these rules among Group employees and executives.

Additionally, the Group has a reporting system for both actual and potential cases (jointly referred to as "incidents") of information leakage. Reported incidents are quickly settled and then analyzed. Based on such analyses, recurrence prevention measures are implemented throughout the Group.

In order to mitigate emerging cyber security threats, the Group examines and undertakes rational countermeasures as necessary. The Group also has in place systems to detect targeted threats that utilize social engineering as well as a supervisory framework to prevent damage.

Corporate Governance Framework, Internal Control System and Risk Management System (As of July 1, 2018)

Corporate Governance

Business Ethics and Compliance**Basic Stance**

Stakeholder trust is the cornerstone of business activities. In order to maintain trust, it is necessary to continuously act in rigorous conformity to business ethics and compliance. In line with the Fundamental Policies concerning Internal Controls within the Tokyo Electron Group, all Group executives and employees are required to maintain high standards of ethics and to act with a clear awareness of compliance.

Business Ethics

In 1998, Tokyo Electron formulated the Code of Ethics of the Tokyo Electron Group as a set of uniform standards to govern all of its global business activities. In the same year, the Company appointed a Chief Business Ethics Director and established the Ethics Committee, which is responsible for promoting business ethics awareness throughout the Tokyo Electron Group. The Ethics Committee comprises the Chief Business Ethics Director, the Ethics Committee Chairman, and presidents of major Group companies in and outside Japan. The members meet semiannually, report on ethics-related issues facing each company, and discuss measures to further improve ethical behavior and compliance.

The Code of Ethics is reviewed in response to changes in the expectations of society. In January 2015, an anti-corruption statement was added to its introduction based on Principle 10 of the United Nations Global Compact, which concerns working against corruption including extortion and bribery. In August 2016, the Group revised the Code of Ethics in light of social changes and the Code of Conduct of the RBA¹.

The Tokyo Electron Group's Code of Ethics and related explanations and Q&A sections are published in Japanese, English, Korean and Chinese and disclosed on the intranet to enable all Group executives and employees, including those overseas, to view them at any time. The Code of Ethics is also publicly accessible from the corporate website.

¹ RBA is a registered trademark of the Responsible Business Alliance.

 The Code of Ethics of the Tokyo Electron Group
www.tel.com/about/compliance

Compliance System

Tokyo Electron has appointed an Internal Control & Compliance Executive Officer from among its executive officers to raise awareness of compliance across the Group

and further improve Group-wide compliance. Each Group company has also drawn up its own compliance regulations, setting out basic compliance-related requirements in line with the Code of Ethics. The compliance regulations are intended to ensure that all individuals who take part in the business activities of the Tokyo Electron Group clearly understand the pertinent laws and regulations, international standards and internal company rules, and consistently apply these rules in all of their activities.

Compliance Education

Through the Group's e-learning system, we provide web-based training programs covering the basics of compliance, export-related compliance, protection of personal information, the Act for Subcontracting and other topics. All executives and employees are required to complete these programs. In addition, other web-based programs tailored to specific positions and job roles are also available, including those on insider trading and the Social Security and Tax Number System.

We also have an online quiz-based business ethics and compliance education course, launched in fiscal 2014, for all Group executives and employees. Updated yearly, the quiz is intended to maintain compliance awareness throughout the Group and disseminate the latest information.

Furthermore, in fiscal 2018, we implemented a test to check employee understanding of compliance, including anti-corruption and anti-bribery issues, in response to increased enforcement of anti-corruption law around the world. To deepen understanding of these topics, we held in-person training for department vice presidents and similar level managers that focused on preventing corruption and bribes to foreign government officials as well as in-person training for Corporate Directors and executive officers that focused on the management of overseas subsidiaries.

Internal Reporting System

The Tokyo Electron Group has an internal reporting system that employees can use to report any activity suspected of being in breach of laws, regulations or business ethics. An ethics hotline and a compliance hotline have been established to receive reports from all Group companies, and each overseas location also has its own reporting system. In fiscal 2018, to further facilitate reporting, the Group set up an external reporting hotline as well as hotlines for reporting

from business partners. In all instances, the system ensures that whistleblowers remain anonymous and are protected from any disadvantage or repercussions.

There were no reports or cases of non-compliance with laws, regulations, or principles of ethics in fiscal 2018 that could have had a material impact on the Group's business or local communities.

Promoting Dialog with Investors**Basic Stance**

Tokyo Electron endeavors to provide opportunities for constructive dialog with growing numbers of investors around the world to contribute to the Company's sustainable growth and increase corporate value over the medium and long term. Furthermore, to the extent that this is reasonable and possible, the Company places emphasis on having the Chairman of the Board and CEO communicate with investors through direct dialog.

IR Activities

Striving to maintain dialog with investors, Tokyo Electron maintains a dedicated Investor Relations Department under the direct control of the CEO. The Chairman of the Board and CEO serve as spokespersons for the Company at such events as earnings release conferences and medium-term management plan briefings for securities analysts and institutional investors, IR conferences in and outside Japan, and individual meetings.

The spokespersons for the IR Department hold individual meetings with investors and periodically relay the opinions of investors at these events to the Chairman of the Board and CEO so that feedback can be of use in management.

Shareholders' Meeting

Tokyo Electron schedules its shareholders' meeting to avoid days on which many such meetings are concentrated as part of its measures to vitalize these meetings and to promote smooth and efficient voting. The Company also mails a Notice of Annual General Meeting of Shareholders to shareholders more than three weeks in advance of the meeting and discloses notices on its website before they are mailed, striving to provide shareholders with information as early as possible. Shareholders are free to cast their votes via the internet, and Tokyo Electron participates in the web based voting platform for institutional investors operated by ICJ, Inc.

To supplement the above shareholder meeting-related initiatives, Tokyo Electron's website carries the resolutions, voting results and presentation materials of shareholders' meetings.

 For more details on our corporate governance, please refer to the Tokyo Electron Corporate Governance Guidelines.

Third-Party Recognition

Tokyo Electron has been selected for inclusion in world-leading environmental, social and governance (ESG) investment indices.

In fiscal 2018, Tokyo Electron was once again selected for inclusion in the DJSI¹ Asia Pacific 2017, the FTSE4Good² Global Index and MSCI World ESG Leaders Index. The Company was also selected for the FTSE Blossom Japan Index and MSCI Japan ESG Select Leaders Index, two ESG indices selected by Japan's Government Pension Investment Fund (GPIF).

¹ DJSI (Dow Jones Sustainability Indices): ESG investment indices developed by U.S.-based S&P Dow Jones Indices LLC and Switzerland-based RobecoSAM AG. The Asia Pacific index covers companies in that region.

Financial Review

Financial Review

Sales and Income

Operating Environment

The overall world economy in fiscal 2018 held firm, with the United States and Europe seeing ongoing steady economic recovery, while the economies of China and Asia were solid.

In the electronics industry, investment in data center servers was brisk, reflecting growth in high-volume data transmission driven by streaming video and other cloud-based services. Demand for semiconductors, especially memory, increased substantially. As a result, the wafer fab equipment market, in which Tokyo Electron operates, grew 37% year on year, surpassing US\$50 billion for the first time ever. At the same time, the display industry saw capital investment aimed at OLED panels for mobile devices and the start of capital investment in large generation 10.5 panels. Accordingly, the market for flat panel display (FPD) production equipment was brisk, growing 40% year on year to approach US\$20 billion.

Sales

Net sales in fiscal 2018 rose 41.4% year on year to ¥1,130.7 billion. This reflected the favorable market environment, expanding demand for cutting-edge semiconductor production equipment (SPE) and increased demand for parts and used equipment sales, modifications and maintenance services. By segment, net sales in the SPE segment grew 40.7% year on year to ¥1,055.2 billion. Net sales in the FPD production equipment segment grew 52.0% year on year to ¥75.0 billion. For details on performance by segment, please refer to Review of Operations and Business Outlook on page 8. Furthermore, net sales in the field solutions

business (encompassing sales of parts and used equipment, modifications and maintenance services) rose 20.5% year on year to ¥251.0 billion, accounting for 22.2% of consolidated net sales.

Gross Profit, SG&A Expenses and Operating Income

Gross profit in fiscal 2018 was up 47.4% year on year to ¥475.0 billion, reflecting the growth in net sales. The gross profit margin rose 1.7 percentage points to 42.0%, mainly due to increased sales of high-value-added products.

SG&A expenses rose 16.4% year on year to ¥193.8 billion, but the ratio of SG&A expenses to consolidated net sales dropped 3.7 percentage points from the previous fiscal year to 17.1% in the fiscal year under review. The Group also steadily advanced cost control measures, as targeted under the medium-term management plan. Consequently, operating income increased 80.6% year on year to ¥281.1 billion, and the operating margin rose 5.4 percentage points to 24.9%, greatly exceeding the previous record high.

R&D Expenses

R&D expenses were up 15.9% year on year to ¥97.1 billion. The main cause of this rise was the reinforcement of R&D in the fields of etch, deposition and cleaning systems, in which the Company is working to expand its market share under the medium-term management plan. Tokyo Electron focused on R&D aimed at enhancing the competitiveness of future products. This included developing innovative technologies to not only enhance the performance of individual products, but optimize entire processes, as well as making products more intelligent.

Tokyo Electron regards advanced technological prowess as the source of its growth. Accordingly, the Company actively invests in growth to produce next-generation products, mainly focusing on fields in which market growth is forecast. In the fiscal year under review, Tokyo Electron increased its market share in key fields related to DRAM and 3D NAND flash memory manufactured using cutting-edge technology, making progress toward the goals of the medium-term management plan.

In FPD production equipment, Tokyo Electron released new products for generation 10.5 panels, which are expected to see rapid market growth going forward.

Other Income (Expenses) and Net Income Attributable to Owners of Parent

During fiscal 2018, net other expenses came to ¥5.9 billion, reflecting ¥3.1 billion in extraordinary loss due to the transition to a defined contribution pension plan and ¥0.9 billion in loss on impairment of goodwill. As a result, income before income taxes came to ¥275.2 billion, up 84.6% year on year. Net income attributable to owners of the parent totaled ¥204.3 billion in fiscal 2018, up 77.4% from fiscal 2017. Net income per share rose 77.4% year on year to ¥1,245.48.

Comprehensive Income

In fiscal 2018, Tokyo Electron recognized comprehensive income of ¥206.1 billion, up from ¥119.9 billion in fiscal 2017. This was mainly due to the ¥204.3 billion in net income, ¥6.3 billion in unrealized gains on

investment securities related to strategically held shares, and ¥4.4 billion in loss on remeasurements of defined benefit plans due to a decrease in the discount rate used to calculate retirement benefits as a result of falling interest rates.

Dividend Policy and Dividends

It is the policy of Tokyo Electron to pay dividends on the basis of business performance. The Company aims for a payout ratio of 50% of net income attributable to owners of the parent. Furthermore, with an eye to ensuring stable dividends, a lower limit of ¥150 per share has been set on annual dividends.¹ Reflecting the Company's strong sales and profit growth, Tokyo Electron paid annual dividends for fiscal 2018 of ¥624 per share (for a payout ratio of 50.1%), its highest ever. Going forward, the Company will seek to build world-class profitability and reciprocate the support of shareholders by delivering profit growth.

¹ This lower limit may be revised in the event that the Company does not generate net income for two consecutive fiscal years.

Financial Position and Cash Flows

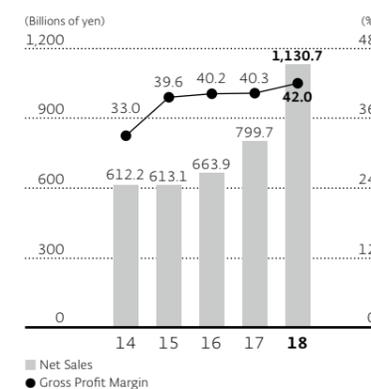

Assets, Liabilities and Net Assets

Assets

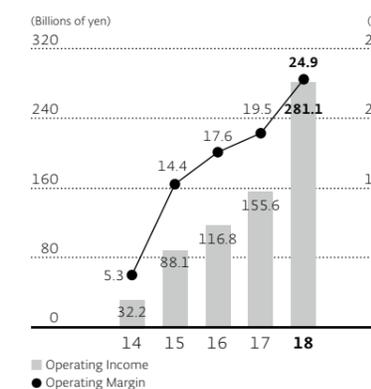

Current assets increased ¥221.1 billion from the end of the previous fiscal year to ¥997.1 billion, reflecting a ¥58.5 billion increase in cash on hand¹ due to the generation of ¥139.7 billion in free cash flow,² a ¥107.8 billion increase in inventories due to increased production to meet robust demand from semiconductor and

Financial Review

Financial Review

FPD manufacturers, and a ¥25.7 billion increase in trade notes and accounts receivable. The turnover period for trade notes and accounts receivable in fiscal 2018 was 52 days, compared with 61 days in fiscal 2017, and the inventory turnover period in fiscal 2018 was 111 days, compared with 108 days in fiscal 2017.

Net property, plant and equipment increased ¥25.5 billion year on year to ¥125.9 billion. This was largely due to ¥45.6 billion in new fixed asset acquisitions, including part of the construction costs for a new logistics building being constructed at the Miyagi Plant to increase productivity as well as R&D equipment acquired to bolster the development of next-generation technologies.

Investments and other assets increased ¥4.5 billion year on year to ¥85.6 billion.

As a result, total assets as of March 31, 2018 stood at ¥1,208.7 billion, up ¥251.2 billion year on year.

1 Cash on hand: Cash and cash equivalents + Short-term investments with original maturities of less than one year
2 Free cash flow: Cash flows from operating activities + Cash flows from investing activities (excluding changes in short-term investments with original maturities of less than one year)

Liabilities and Net Assets

Current liabilities increased ¥120.6 billion from the end of fiscal 2017 to ¥368.4 billion at the end of fiscal 2018. This was mainly due to a ¥32.2 billion increase in customer advances, a ¥29.3 billion increase in trade notes and accounts payable, a ¥12.6 billion increase in accrued employees' bonuses and a ¥34.9 billion increase in income taxes payable.

Non-current liabilities increased ¥5.0 billion year on year to ¥68.7 billion.

Net assets came to ¥771.5 billion at the end of fiscal 2018, up ¥125.5 billion from the end of fiscal 2017. This was mainly due to a ¥122.0 billion increase in retained earnings, reflecting the recording of ¥204.3 billion in net income attributable to owners of the parent and ¥82.2 billion paid in cash dividends (¥36.7 billion for the fiscal 2017 year-end dividend and ¥45.4 billion for the fiscal 2018 interim dividend).

As a result, the equity ratio fell 3.7 percentage points year on year to 63.5% at the end of March 2018. ROE climbed to 29.0% from 19.1% in fiscal 2017.

Capital Expenditures¹ and Depreciation and Amortization²

Capital expenditures totaled ¥45.6 billion in fiscal 2018, a 120.3% year-on-year increase. Major expenditures included the acquisition of R&D machinery and equipment in order to strengthen key areas in the SPE business.

Depreciation and amortization increased 15.4% to ¥20.6 billion.

1 Capital expenditures represent only the gross increase in property, plant and equipment.
2 Depreciation and amortization does not include amortization of goodwill or losses on impairment.

Cash Flows

The balance of cash and cash equivalents at the end of March 2018 stood at ¥257.8 billion, an increase of ¥93.5 billion from the end of fiscal 2017. Cash on hand, which consists of cash and cash equivalents as well as short-term investments with original maturities of less than one year not included in cash and cash equivalents, increased ¥58.5 billion year on year to ¥373.8 billion at the end of March 2018. Cash flows during the fiscal year under review were as follows.

Net cash provided by operating activities came to ¥186.5 billion, up ¥49.6 billion from fiscal 2017. Major contributors were ¥275.2 billion in income before income taxes, a ¥31.6 billion increase in customer advances, a ¥28.5 billion increase in trade notes and accounts payable, and ¥20.6 billion in depreciation and amortization. Major outflows included a ¥109.8 billion increase in inventories, ¥49.7 billion in income taxes paid, and a ¥25.9 billion increase in trade notes and accounts receivable.

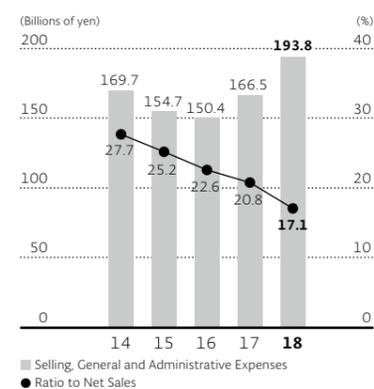

Net cash used in investing activities was ¥11.8 billion, compared with ¥28.8 billion used in the previous fiscal year. This was mainly due to ¥41.7 billion used as payment for purchases of property, plant and equipment and an inflow of ¥35.0 billion due to a net decrease in short-term investments.

Net cash used in financing activities came to ¥82.5 billion, compared with ¥39.3 billion in fiscal 2017. This was mainly attributable to ¥82.2 billion in dividends paid.

■ Financial Review

Financial Review

Business-Related and Other Risks

The following risks may have a material impact on Tokyo Electron's business performance, stock price, or financial position.

(1) Impact from Changes in the Semiconductor Market

Tokyo Electron has achieved a high profit margin by concentrating resources in high-tech fields, including semiconductor production equipment, where technological innovation is rapid but Tokyo Electron can effectively use its strengths. Although technological change is responsible for the semiconductor market's rapid growth, Tokyo Electron has actively undertaken structural reforms to be able to generate profits under any circumstances, including when the market contracts temporarily due to imbalance of supply and demand. However, order cancellations, excess capacity and personnel and increased inventories resulting from an unexpectedly large market contraction, losses from bad debts resulting from the worsening of a customer's financial position, and supply shortages resulting from the worsening of a supplier's management situation, could adversely affect Tokyo Electron's business performance considerably.

(2) Impact from Concentration of Transactions on Particular Customers

Tokyo Electron has been successful at increasing transactions with the leading semiconductor manufacturers worldwide, including those in Japan, through the provision of products featuring outstanding, cutting-edge technology and of services offering a high level of customer satisfaction. However, Tokyo Electron's sales may from time to time be temporarily concentrated on particular customers due to the timing of large capital investments of major semiconductor manufacturers. The resulting escalation in sales competition could adversely affect Tokyo Electron's business performance.

(3) Impact from Research and Development

Through ongoing and proactive R&D investment and activities in cutting-edge technologies—miniaturization, vacuum, plasma, thermal processing, coating/developing, cleaning, wafer-transfer and clean technologies—Tokyo Electron has created advanced technologies. At the same time, by quickly bringing to market new products incorporating these technologies, Tokyo Electron has successfully captured a high market share in each of the product fields it has entered and generated a high profit margin. However, delays in the launch of new products and other factors could adversely affect Tokyo Electron's business performance.

(4) Safety-Related Impact

Tokyo Electron's basic philosophy is to always bear in mind safety and health in the execution of business activities, including development, manufacturing, sales, services and management. In accordance with this philosophy, Tokyo Electron works actively and continuously to improve the safety of its products and to eliminate any harmful impact on health. However, harm to customers, order cancellations or other circumstances resulting from safety or other problems related to Tokyo Electron's products could adversely affect Tokyo Electron's business performance.

(5) Impact from Quality Issues

Tokyo Electron actively develops outstanding, cutting-edge technologies for incorporation in new products that are brought quickly to market. At the same time, Tokyo Electron works to establish a quality assurance system, efforts that include obtaining ISO 9001 certification, as well as to establish a world-class service system. These actions have resulted in a large number of customers adopting Tokyo Electron's products. However, because Tokyo Electron's products are based on cutting-edge technologies, and due to other factors, many of the technologies developed are in unfamiliar fields. The occurrence of unforeseen defects or other issues could adversely affect Tokyo Electron's business performance.

(6) Impact of Intellectual Property Rights

In order to distinguish its products and make them more competitive, Tokyo Electron has promoted its R&D strategy for the early development of cutting-edge technologies together with its business and intellectual property strategies. This approach has enabled Tokyo Electron to obtain sole possession of many proprietary technologies that have been instrumental to the Company's ability to capture a high market share and generate high profit margins in each of its product fields. Tokyo Electron's products incorporate and optimize many of these proprietary cutting-edge technologies. There may be cases in which, by avoiding the use of third-party technologies and intellectual property rights, Tokyo Electron's business performance could be adversely affected.

(7) Impact of Fluctuating Foreign Exchange Rates

Success in the development of overseas operations has increased the share of sales generated overseas. As a rule, Tokyo Electron conducts export transactions on a yen basis to avert exposure to foreign currency risks. However, some exports are denominated in foreign currencies. In these cases, Tokyo Electron hedges foreign currency risk by using a forward foreign exchange contract when an order is received or by other means. However, foreign exchange rate risks can arise from fluctuations in prices due to sudden foreign exchange movements, which could have an indirect adverse effect on Tokyo Electron's business performance.

(8) Influence of Corporate Acquisitions

As part of its business strategy, Tokyo Electron conducts corporate acquisitions in order to expand into new business areas, secure new technologies and business platforms, and strengthen the competitiveness of existing businesses. The Company conducts due diligence and carefully deliberates each specific acquisition. However, in the event that the results following an acquisition do not meet expectations, Tokyo Electron's business performance could be adversely affected.

(9) Impact from Major Lawsuits or Legal Actions

Tokyo Electron is not currently involved in any lawsuits or other legal actions that are likely to significantly influence its business results. However, in the event that the Company's business or other activities become the subject of a major lawsuit or other legal action, depending on the outcome of such action, Tokyo Electron's business results could be adversely affected.

(10) Impact of Laws and Regulations

Tokyo Electron operates globally and is therefore subject to and strives to ensure compliance with the laws and regulations of the countries and regions where it does business, including import and export regulations, environmental regulations and transfer pricing rules. However, should the Company be unable to respond adequately to unforeseen tightening or other changes to such laws or regulations, such changes could adversely affect Tokyo Electron's business performance.

(11) Other Risks

Tokyo Electron is actively engaged in reforming its corporate structure so that it can generate profits even when markets contract. These reforms have entailed creating new high-growth and high-return businesses and pursuing higher earnings from existing businesses. At the same time, Tokyo Electron has promoted activities to preserve the environment and worked to restructure its compliance, risk management and information security management systems. However, as long as it conducts business activities, as with peer companies or companies in different industries, Tokyo Electron is subject to the effect of many other factors. These include the world and regional economic environments, natural disasters, war, terrorism, infectious diseases and other unavoidable occurrences, financial or stock markets, government or other regulations, supply chains, market conditions for products and real estate, the ability to recruit personnel in Japan and overseas, competition over standardization, and loss of key personnel. Any of these factors could adversely affect Tokyo Electron's business performance.

¹ From fiscal 2015, Electronic components and computer networks were excluded because Tokyo Electron Device Limited, a former consolidated subsidiary, became an equity method affiliate. Photovoltaic panel (PV) production equipment was included in FPD production equipment until fiscal 2012 but from fiscal 2016, it has been included in Other.

² From fiscal 2011, the Company applied "Accounting Standards for Presentation of Comprehensive Income" (Statement No. 25) released by the Accounting Standards Board of Japan (ASBJ). Accordingly, comprehensive income (loss) has been disclosed from fiscal 2010.

³ Depreciation and amortization does not include amortization and loss on impairment of goodwill.

⁴ Capital expenditures only represent the gross increase in property, plant and equipment.

⁵ From fiscal 2011, the Company calculated net income per share of common stock (diluted) in accordance with "Accounting Standard for Earning Per Share" (Statement No. 2) and "Guidance on Accounting Standard for Earnings Per Share" (Guidance No. 4) released by the ASBJ. Dilution is not assumed for the years ended March 31, 2014 and 2010.

⁶ The amounts in this summary in millions and thousands of yen; thousands of U.S. dollars; and thousands of shares as of and for the years ended March 31, 2016 and prior are rounded to the nearest unit. Such amounts as of and for the years ended March 31, 2017 and onward are truncated at the nearest unit. Accordingly, totals for the years ended March 31, 2017 and onward do not necessarily agree with the sum of the corresponding individual amounts.

■ Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

Tokyo Electron Limited and Subsidiaries
Years ended March 31, 2018 and 2017

1. Basis of Presentation of Consolidated Financial Statements

The accompanying consolidated financial statements of Tokyo Electron Limited (hereinafter "the Company") and its subsidiaries (hereinafter collectively referred to as "Tokyo Electron") have been prepared in accordance with the provisions set forth in the Financial Instruments and Exchange Act of Japan and its related accounting regulations, and in conformity with accounting principles generally accepted in Japan, which are different in certain respects as to application and disclosure requirements of International Financial Reporting Standards.

The Company uses financial statements prepared by foreign subsidiaries in accordance with International Financial Reporting Standards or U.S. generally accepted accounting principles for the preparation of the consolidated financial statements, together with adjustment for certain items which are required to be adjusted in the consolidation process.

The accompanying consolidated financial statements have been restructured and translated into English from the statutory Japanese language consolidated financial statements. Some supplementary information included in the statutory Japanese language consolidated financial statements is not presented in the accompanying consolidated financial statements.

The amounts in the consolidated financial statements and associated notes shown in millions and thousands of yen; thousands of U.S. dollars; and thousands of shares as of and for the years ended March 31, 2018 and 2017 are truncated at the nearest unit. Accordingly, totals do not necessarily agree with the sum of the corresponding individual amounts.

U.S. dollar amounts included herein are solely for the convenience of readers and are presented at the rate of ¥106.24 to \$1.00, the approximate rate as of March 31, 2018. The translation should not be construed as a representation that the Japanese yen amounts shown could be converted into U.S. dollars at that or any other rate.

2. Summary of Significant Accounting Policies**(a) Principles of consolidation**

The consolidated financial statements include the accounts of the Company and its 33 and 35 subsidiaries as of March 31, 2018 and 2017, respectively. All significant inter-company accounts, transactions and unrealized profits or losses have been eliminated through consolidation procedures.

There are 9 and 8 affiliates accounted for using the equity method as of March 31, 2018 and 2017, respectively.

The fiscal year-end of all entities is March 31, except for 3 consolidated foreign subsidiaries. Financial statements provisionally closed for the period ending March 31 are used for those subsidiaries.

(b) Foreign currency translation

All assets and liabilities denominated in foreign currencies are translated into Japanese yen at the year-end rates, except for those hedged by forward exchange contracts, which are translated at the contracted rates. Resulting exchange gains and losses are included in earnings for the year.

Revenue and expense items are translated at the rates that approximate those prevailing at the time of the transactions.

The balance sheet accounts of foreign subsidiaries are translated into Japanese yen at the rates of exchange in effect at the balance sheet date, except for shareholders' equity accounts, which are translated at the historical rates. Revenue and expense accounts of foreign subsidiaries are translated at average rates of exchange in effect during the year. Resulting translation adjustments are presented in net assets as a component of accumulated other comprehensive income in the consolidated balance sheets.

(c) Cash and cash equivalents

Cash and cash equivalents consist of cash, short term deposits and low-risk financial instruments with original maturities of three months or less.

(d) Short-term investments

Short-term investments consist of short term deposits and low-risk financial instruments with original maturities of more than three months.

(e) Investment securities

Tokyo Electron examines the intent of holding each security and classifies those securities as trading securities, held-to-maturity debt securities or other securities. Tokyo Electron has no trading securities as of March 31, 2018 and 2017. Held-to-maturity debt securities are stated mainly at amortized cost. Other securities with market prices are valued at fair value at the balance sheet date. The differences between the book value and fair value of other securities, net of applicable income taxes, are presented in net assets as a component of accumulated other comprehensive income. Other securities without market prices are valued at cost using the weighted-average method.

The cost of sold securities is calculated using the weighted average method.

(f) Inventories

Inventories are stated at the lower of cost, determined by principally the specific identification method, or net realizable value, which is defined as selling price less estimated additional manufacturing costs and estimated direct selling expenses.

(g) Property, plant and equipment

Property, plant and equipment are stated at cost. Depreciation of buildings, machinery and equipment of the Company and its domestic subsidiaries is computed using the declining-balance method, except for buildings acquired since April 1, 1998 and facilities attached to buildings and structures acquired since April 1, 2016 which are depreciated using the straight-line method, based on the estimated useful lives of assets. Foreign subsidiaries mainly apply the straight-line method over the estimated useful lives of assets.

Estimated useful lives of property, plant and equipment are as follows:

| | |
|-------------------------|---------------|
| Buildings | 2 to 60 years |
| Machinery and equipment | 2 to 17 years |

(h) Intangible assets (excluding goodwill)

Intangible assets are amortized by the straight-line method over their estimated useful lives.

(i) Goodwill

Goodwill is evaluated on an individual basis and amortized by the straight-line method over a period not exceeding 20 years.

(j) Impairment of fixed assets

Tokyo Electron evaluates the carrying value of fixed assets held for use in the business and idle assets.

If the carrying value of a fixed asset is impaired, a loss is recognized based on the amount by which the carrying value exceeds its recoverable amount, being the higher of the net selling price or the value in use of the assets. Net selling price is determined using the fair value less disposal costs and value in use is based on the total amount of discounted cash flows estimated to be generated from the continuing use of the individual assets or the asset group and the disposal of the assets.

(k) Allowance for doubtful accounts

The allowance for doubtful accounts is provided at an amount determined based on the historical experience of bad debts with respect to ordinary receivables, and an estimate of uncollectible amounts determined by reference to

specific doubtful receivables from customers which are experiencing financial difficulties.

(l) Employee benefits

The Company and its domestic subsidiaries provide defined benefit plans for their employees. Expected benefits are attributed to accounting periods by the benefit formula basis. Prior service costs are charged to earnings on a straight-line basis, beginning from the fiscal year in which they are incurred, over a fixed number of years (4 years) within the average remaining years of service of employees when the changes occur. Actuarial differences are charged to earnings on a straight-line basis, beginning from the following fiscal year after they are incurred, over a fixed number of years (4 years) within the average remaining years of service of employees when the differences occur.

The provision for accrued pension and severance costs for directors and audit & supervisory board members of the Company and its domestic subsidiaries is calculated in accordance with internal regulations.

The Company and certain domestic subsidiaries decided to discontinue the payment of severance pay for directors and audit & supervisory board members after April 1, 2005, and at the general shareholders' meeting in June 2005, it was resolved that the severance pay for directors and audit & supervisory board members until March 31, 2005 would be paid at the termination of their service and the decision regarding the payment amount for each director and audit & supervisory board member was delegated to the board of directors and audit & supervisory board members. The accruals for severance costs for directors and audit & supervisory board members are included in Net liability for defined benefits in the consolidated balance sheets.

(m) Accrued warranty expenses

Tokyo Electron's products are generally subject to warranty, and Tokyo Electron accrues estimated warranty costs when product revenue is recognized. Estimated after-sale repair expenses over warranty periods are accrued based on the historical ratio of actual repair expenses to corresponding sales.

(n) Derivatives and hedge accounting

The Company and certain subsidiaries make use of derivatives in order to manage certain risks arising from adverse fluctuations in foreign currency exchange rates. The amount of derivatives is limited to the extent of foreign currency assets, liabilities and actual orders, and Tokyo Electron does not trade in derivatives for speculative purposes.

Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

Derivatives are carried at fair value in the consolidated balance sheet with changes in unrealized gain or loss charged or credited to earnings, except for those which meet the criteria for hedge accounting. Unrealized gains or losses on hedging instruments, net of taxes, are reported in net assets as a component of accumulated other comprehensive income (loss). Receivables and payables hedged by qualified forward foreign exchange contracts are translated at the corresponding foreign exchange contract rates.

(o) Income taxes

Tokyo Electron records deferred tax assets and liabilities on temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes and net operating loss carryforwards. Deferred tax assets and liabilities are measured using the enacted tax rates and laws which are expected to be in effect when net operating loss carryforwards and temporary differences are expected to be realized.

(p) Revenue recognition

Revenue from Semiconductor and FPD (Flat Panel Display) production equipment is principally recognized at the time of the customer confirmation of set-up and testing of products. Revenue from equipment not requiring substantial installation is recognized at the time of shipment. Service revenue maintenance is recognized ratably over the term of the maintenance contract.

(q) Research and development expenses

Research and development expenses are charged to earnings as incurred and amounted to ¥97,103 million (\$914,000 thousand) and ¥83,800 million for the years ended March 31, 2018 and 2017, respectively.

(r) Reclassifications

Certain reclassifications have been made to the prior year's consolidated financial statements to conform with the presentation used for the year ended March 31, 2018.

3. Change in Accounting Policies and Adoption of New Accounting Standards**Year ended March 31, 2017**

In accordance with the revision to the Japanese Corporation Tax Act, the Company and its domestic subsidiaries adopted the "Practical Solution on a change in depreciation method due to Tax Reform 2016" (ASBJ Practical Issues Task Force No. 32, June 17, 2016) and changed the depreciation method for facilities attached to buildings and structures

acquired since April 1, 2016 from the declining-balance method to the straight-line method, starting from the fiscal year ended March 31, 2017.

The effect of this change on the consolidated financial statements is immaterial.

4. Additional Information

The Company and its domestic subsidiaries adopted "Revised Implementation Guidance on Recoverability of Deferred Tax Assets" (ASBJ Guidance No. 26, March 28, 2016) from the year ended March 31, 2017.

5. Accounting Standards Issued but Not yet Adopted

"Implementation Guidance on Tax Effect Accounting" (ASBJ Guidance No. 28, February 16, 2018)

"Implementation Guidance on Recoverability of Deferred Tax Assets" (ASBJ Guidance No. 26 (revised 2018), February 16, 2018)

(1) Overview

The above guidance was revised with regard to the treatment of taxable temporary differences for investments in subsidiaries within the context of non-consolidated financial statements, and to clarify the approach to determining recoverability of deferred tax assets in a company which is categorized as "Type 1" according to the guidance.

(2) Effective date

Effective from the beginning of the fiscal year ending March 31, 2019.

(3) Effects of the application of the guidance

The Company and its consolidated domestic subsidiaries are currently in the process of determining the effects of this new guidance on the consolidated financial statements.

"Accounting Standard for Revenue Recognition" (ASBJ Statement No. 29, March 30, 2018 (hereinafter, "Statement No.29"))

"Implementation Guidance on Accounting Standard for Revenue Recognition" (ASBJ Guidance No. 30, March 30, 2018 (hereinafter, "Guidance No.30"))

(1) Overview

The International Accounting Standards Board (IASB) and the U.S. Financial Accounting Standards Board (FASB) collaborated on a project to develop a single, comprehensive revenue recognition model and jointly issued new revenue recognition standards "Revenue from Contracts with

Customers" (IFRS 15 published by IASB, Topic 606 published by FASB) in May 2014. IFRS 15 is effective for annual reporting periods beginning on or after 1 January 2018 and Topic 606 is effective for annual reporting periods beginning after December 15, 2017.

Considering the above circumstances, the Accounting Standard Board of Japan (ASBJ) also developed a new revenue recognition and issued Statement No.29 together with Guidance No.30.

ASBJ's basic policy in developing the new revenue recognition standards is to first incorporate the core principle of IFRS 15 in the light of improving the international comparability of financial statements and then add additional alternative treatments to the extent that international comparability would not be significantly impaired where any business practices operated in Japan need to be considered.

(2) Effective date

Effective from the beginning of the fiscal year ending March 31, 2022.

(3) Effects of the application of the standards

The Company and its consolidated subsidiaries are currently in the process of determining the effects of these new standards on the consolidated financial statements.

6. Securities

Other securities as of March 31, 2018 and 2017 are as follows:

| 2018: | Millions of yen | |
|---|-----------------|----------------|
| | Cost | Carrying value |
| Non-current | | |
| Securities with carrying value exceeding acquisition cost | | |

| Securities with carrying value exceeding acquisition cost | | |
| Equity securities | ¥7,183 | ¥22,704 |
| Securities with carrying value not exceeding acquisition cost | | |
| Equity securities | — | — |
| Total | ¥7,183 | ¥22,704 |

| 2018: | Thousands of U.S. dollars | |
|---|---------------------------|------------------|
| | Cost | Carrying value |
| Non-current | | |
| Securities with carrying value exceeding acquisition cost | | |
| Equity securities | \$71,730 | \$303,971 |
| Securities with carrying value not exceeding acquisition cost | | |
| Equity securities | 7,714 | 7,714 |
| Other | 141 | 141 |
| Total | \$79,587 | \$311,827 |

Held-to-maturity securities classified as current assets are ¥286,500 million (\$2,696,724 thousand) and ¥244,500 million as of March 31, 2018 and 2017, respectively.

Reconciliation of held-to-maturity securities as of March 31, 2018 and 2017 to the amounts of short-term investments in the consolidated balance sheets are as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|--|-----------------|-----------------|---------------------------|
| | 2018 | 2017 | 2018 |
| Held-to-maturity (current) | ¥286,500 | ¥244,500 | \$2,696,724 |
| Deposits and low-risk financial instruments with original maturities of three months or less | (170,500) | (93,500) | (1,604,856) |
| Deposits with original maturities of more than three months | — | — | — |
| Short-term investments | ¥116,000 | ¥151,000 | \$1,091,867 |

Net loss on devaluation of investment securities was ¥536 million (\$5,049 thousand) and ¥105 million for the years ended March 31, 2018 and 2017, respectively.

For the years ended March 31, 2018 and 2017, the amounts of gain and loss on sale of available-for-sale securities were immaterial.

7. Inventories

Inventories as of March 31, 2018 and 2017 are as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|-----------------|---------------------------|
| | 2018 | 2017 | 2018 |
| Finished products | ¥220,497 | ¥152,629 | \$2,075,465 |
| Work in process, raw materials and supplies | 123,573 | 83,626 | 1,163,154 |
| Total | ¥344,071 | ¥236,256 | \$3,238,620 |

The amounts of change in inventory provision included in cost of sales in the consolidated statements of income for the years ended March 31, 2018 and 2017 were an increase of ¥173 million (\$1,635 thousand) and a decrease of ¥3,060 million, respectively.

Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

8. Pledged Assets

Tokyo Electron did not hold any assets pledged as collateral as of March 31, 2018 and 2017.

9. Short-Term Borrowings

There are no short-term borrowings classified as current liabilities as of March 31, 2018 and 2017.

As of March 31, 2018 and 2017, Tokyo Electron had unused lines of credit amounting to ¥126,953 million (\$1,194,971 thousand) and ¥126,944 million, respectively.

10. Employee Benefits

The Company and its domestic subsidiaries provide a cash balance plan and a non-contributory retirement and severance benefit plan as defined benefit plans for their employees. Further, certain consolidated overseas subsidiaries provide defined benefit plans for their employees.

Effective April 1, 2018, Tokyo Electron and its domestic subsidiaries converted a part of their defined benefit plans to a defined contribution plan. The loss on revision of retirement benefit plan of ¥3,154 million (\$29,690 thousand) resulting from this change was recognized and presented in other income (expenses) for the year ended March 31, 2018 in accordance with the "Accounting Procedures for Conversion between Different Retirement Benefit Schemes" (Corporate Accounting Standards Implementation Guidelines No. 1) and the "Practical Treatment of Accounting Procedures for Conversion between Different Retirement Benefit Schemes" (Practical Issues Task Force No. 2).

Defined benefit plans

(1) Movement of defined benefit obligations

| | Millions of yen | | Thousands of U.S. dollars |
|--|-----------------|----------|---------------------------|
| | 2018 | 2017 | 2018 |
| Balance at April 1, 2017 and 2016 | ¥118,660 | ¥116,228 | \$1,116,912 |
| Service cost | 6,052 | 6,080 | 56,967 |
| Interest cost | 963 | 772 | 9,066 |
| Actuarial gain (loss) | 4,632 | (3,075) | 43,601 |
| Benefits paid | (3,029) | (2,708) | (28,517) |
| Prior service cost | 1,690 | — | 15,915 |
| Decrease by conversion of a part of defined benefit plans to a defined contribution plan | (15,946) | — | (150,100) |
| Increase by transfer | — | 1,327 | — |
| Foreign currency exchange rate changes | (30) | 101 | (288) |
| Other | — | (65) | — |
| Balance at March 31, 2018 and 2017 | ¥112,992 | ¥118,660 | \$1,063,557 |

(2) Movement of plan assets

| | Millions of yen | | Thousands of U.S. dollars |
|--|-----------------|---------|---------------------------|
| | 2018 | 2017 | 2018 |
| Balance at April 1, 2017 and 2016 | ¥67,653 | ¥62,549 | \$636,798 |
| Expected return on plan assets | 1,400 | 1,266 | 13,186 |
| Actuarial gain | 526 | 540 | 4,960 |
| Employer contributions | 3,577 | 2,940 | 33,678 |
| Benefits paid | (915) | (1,011) | (8,616) |
| Decrease by conversion of a part of defined benefit plans to a defined contribution plan | (18,523) | — | (174,359) |
| Increase by transfer | — | 1,289 | — |
| Foreign currency exchange rate changes | (24) | 84 | (227) |
| Other | (12) | (6) | (119) |
| Balance at March 31, 2018 and 2017 | ¥53,683 | ¥67,653 | \$505,301 |

(3) Reconciliation from defined benefit obligations and plan assets to liability (asset) for defined benefits

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|----------|---------------------------|
| | 2018 | 2017 | 2018 |
| Funded defined benefit obligations | ¥54,677 | ¥63,761 | \$514,657 |
| Plan assets | (53,683) | (67,653) | (505,301) |
| Funded status | 993 | (3,892) | 9,355 |
| Unfunded defined benefit obligations | 58,315 | 54,899 | 548,899 |
| Net liability for defined benefits at March 31, 2018 and 2017 | ¥59,309 | ¥51,007 | \$558,255 |
| Net liability for defined benefits | 59,309 | 55,825 | 558,255 |
| Net asset for defined benefits | — | (4,818) | — |
| Net liability for defined benefits at March 31, 2018 and 2017 | ¥59,309 | ¥51,007 | \$558,255 |

Note: The provision for accrued pension and severance costs for directors and audit & supervisory board members of ¥374 million (\$3,529 thousand) and ¥374 million as of March 31, 2018 and 2017 is not included.

(4) Defined benefit costs

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|---------|---------------------------|
| | 2018 | 2017 | 2018 |
| Service cost | ¥6,052 | ¥6,080 | \$56,967 |
| Interest cost | 963 | 772 | 9,066 |
| Expected return on plan assets | (1,400) | (1,266) | (13,186) |
| Net actuarial gain (loss) amortization | (1,237) | 291 | (11,649) |
| Other | 388 | 290 | 3,654 |
| Total defined benefit costs for the years ended March 31, 2018 and 2017 | ¥4,765 | ¥6,168 | \$44,852 |
| Loss on transfer to defined contribution plan (Note) | 3,154 | — | 29,690 |

Note: Loss on revision of retirement benefit plan was recognized in other income (expenses) for the year ended March 31, 2018.

(5) Remeasurements of defined benefit plans

| | Millions of yen | | Thousands of U.S. dollars |
|-----------------------|-----------------|--------|---------------------------|
| | 2018 | 2017 | 2018 |
| Prior service cost | ¥(1,354) | ¥ — | \$(12,747) |
| Actuarial gain (loss) | (5,093) | 3,869 | (47,947) |
| Total | ¥(6,448) | ¥3,869 | \$(60,695) |

Note: Prior service cost and actuarial loss for the year ended March 31, 2018 include the reclassification adjustments of ¥336 million (\$3,167 thousand) and ¥240 million (\$2,263 thousand), respectively associated with the conversion of a part of defined benefit plans to a defined contribution plan.

(6) Accumulated remeasurements of defined benefit plans

| | Millions of yen | | Thousands of U.S. dollars |
|--|-----------------|----------|---------------------------|
| | 2018 | 2017 | 2018 |
| Prior service cost that is yet to be recognized (before tax) | ¥(1,354) | ¥ — | \$(12,747) |
| Net actuarial loss that is yet to be recognized (before tax) | (7,806) | (2,712) | (73,482) |
| Total | ¥(9,161) | ¥(2,712) | \$(86,229) |

(7) Plan assets

1. Plan assets comprise:

| | 2018 | 2017 |
|--|------|------|
| Bonds | 38% | 39% |
| Life insurance company general account | 25 | 26 |
| Equity securities | 20 | 20 |
| Alternative investments (Note) | 9 | 9 |
| Cash and cash equivalents | 1 | 3 |
| Other | 7 | 3 |
| Total | 100% | 100% |

Note: Alternative investments consist of hedge funds and insurance-linked securities

2. Long-term expected rate of return

Current and target asset allocations, and historical and expected returns on the various categories of plan assets have been considered in determining the long-term expected rate of return.

(8) Actuarial assumptions

The principal actuarial assumptions as of and for the years ended March 31, 2018 and 2017 are as follows:

| | 2018 | 2017 |
|-----------------------------------|-------|-------|
| Discount rate | 0.46% | 0.71% |
| Long-term expected rate of return | 2.00% | 2.00% |

The expected rates of salary increase for the years ended March 31, 2018 and 2017 are also considered as one of the actuarial assumptions, and are set based on the salary increase index by age group as of January 1, 2018 and January 1, 2014, respectively.

11. Income Taxes

Significant components of the deferred tax assets and liabilities as of March 31, 2018 and 2017 are as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|----------|---------------------------|
| | 2018 | 2017 | 2018 |
| Deferred tax assets | | | |
| Elimination of unrealized profit in inventories | ¥27,718 | ¥19,276 | \$260,900 |
| Net liability for defined benefits | 18,129 | 18,102 | 170,648 |
| Net operating loss carryforwards | 10,969 | 15,402 | 103,254 |
| Accrued employees' bonuses | 8,185 | 4,977 | 77,051 |
| Devaluation of inventories | 4,148 | 3,995 | 39,049 |
| Accrued warranty expenses | 2,675 | 2,168 | 25,186 |
| Accrued enterprise taxes | 2,186 | 1,515 | 20,583 |
| Other | 14,535 | 12,600 | 136,815 |
| Total gross deferred tax assets | 88,550 | 78,038 | 833,490 |
| Less valuation allowance | (8,043) | (9,808) | (75,711) |
| Total deferred tax assets | 80,506 | 68,229 | 757,778 |
| Deferred tax liabilities | | | |
| Net unrealized gains on investment securities | (7,554) | (4,757) | (71,105) |
| Undistributed earnings of subsidiaries | (6,143) | (5,197) | (57,828) |
| Other | (4,384) | (7,327) | (41,267) |
| Total deferred tax liabilities | (18,082) | (17,282) | (170,201) |
| Net deferred tax assets | ¥62,424 | ¥50,947 | \$587,577 |

Net deferred tax assets are included in the consolidated balance sheets as of March 31, 2018 and 2017 as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|-------------------------------|-----------------|---------|---------------------------|
| | 2018 | 2017 | 2018 |
| Current assets | ¥50,505 | ¥36,892 | \$475,385 |
| Investments and other assets | 17,846 | 19,128 | 167,979 |
| Other current liabilities | — | — | — |
| Other non-current liabilities | (5,926) | (5,073) | (55,788) |

The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the period in which temporary differences become deductible and net operating loss carry forwards are available to be utilized. For assessment of the realizability of deferred tax assets, management considers the scheduled reversal of deferred tax liabilities, future estimated taxable income, tax planning strategies and level of net operating loss carryforwards, if any, in accordance with accounting principles generally accepted in Japan.

Based on the level of historical taxable income and future estimated taxable income over the periods which the temporary differences are deductible and net operating loss carry forwards are available to be utilized, management believes

Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

Tokyo Electron will realize the benefits of deferred tax assets, net of valuation allowance, as of March 31, 2018 and 2017.

The Company and its wholly-owned domestic subsidiaries apply a consolidated tax filing system for corporate tax purposes.

Significant components of the difference between the statutory and effective tax rates for the years ended March 31, 2018 and 2017 are as follows:

| | 2018 | 2017 |
|---|--------|--------|
| Statutory tax rate in Japan | 30.86% | 30.86% |
| Adjustments: | | |
| Tax credits | (6.23) | (8.41) |
| Effect of enacted changes in tax rates on net deferred tax assets | 1.55 | — |
| Difference in statutory tax rates of subsidiaries | (1.33) | (0.11) |
| Others, net | 0.89 | 0.37 |
| Effective tax rate | 25.74% | 22.71% |

Year ended March 31, 2018

The U.S. federal income tax rate applied to the consolidated subsidiaries in the U.S. is reduced from 35% to 21% associated with the U.S. tax reform legislation signed into law on December 22, 2017.

Net deferred tax assets were reduced by ¥3,029 million (\$28,519 thousand) and income taxes were increased by ¥3,211 million (\$30,233 thousand) as of and for the year ended March 31, 2018 resulting from this tax rate reduction.

Year ended March 31, 2017

The Company received notification from the National Tax Agency, Japan (NTA) dated February 14, 2017, that agreement had been reached through the Mutual Agreement Procedure (MAP) between the NTA and U.S. income tax authorities concerning the transfer pricing adjustments assessed during prior historical periods relating to the transactions between the Company and its U.S. subsidiary. As a result, ¥405 million of tax benefit is included in current income tax expense as the difference between the current tax refunds and the estimated amount recorded in the prior year.

12. Other Income (Expenses)

Loss on impairment of property, plant and equipment, goodwill and other assets

For the year ended March 31, 2018, the following loss on impairment was recognized:

Goodwill of TEL NEXX, Inc.

| Location | Purpose of use | Asset Type | Loss on impairment | |
|----------------------------------|-----------------|------------|--------------------|---------------------------|
| | | | Millions of yen | Thousands of U.S. dollars |
| Billerica, Massachusetts, U.S.A. | Business assets | Goodwill | ¥925 | \$8,714 |

Tokyo Electron performed an impairment test and recognized loss on impairment of goodwill of TEL NEXX, Inc., a subsidiary manufacturing semiconductor production equipment, due to TEL NEXX, Inc.'s reconsideration of its business plan. Tokyo Electron recognized the difference between the book value and the recoverable amount of goodwill as loss on impairment. The recoverable amount was measured as value in use, and was calculated by discounting future cash flows at a discount rate of 14.0%.

Loss on disaster

Loss on disaster of ¥7,521 million for the year ended March 31, 2017 represents the actual and estimated expenses relating to the recovery of buildings, production and development facilities as well as the disposal of inventories caused by the impact of the Kumamoto earthquake in 2016.

Loss on revision of retirement benefit plan

Effective April 1, 2018, Tokyo Electron and its domestic subsidiaries converted a part of their defined benefit plans to a defined contribution plan. The loss on revision of retirement benefit plan of ¥3,154 million (\$29,690 thousand) resulting from this change was recognized and presented in other income (expenses) for the year ended March 31, 2018 in accordance with the "Accounting Procedures for Conversion between Different Retirement Benefit Schemes" (Corporate Accounting Standards Implementation Guidelines No. 1) and the "Practical Treatment of Accounting Procedures for Conversion between Different Retirement Benefit Schemes" (Practical Issues Task Force No. 2).

13. Net Assets

Net assets comprises four subsections, which are shareholders' equity, accumulated other comprehensive income, share subscription rights and non-controlling interests.

Under Japanese laws and regulations, the entire amount paid for new shares is required to be designated as common stock. However, a company may, by a resolution of the board of directors, designate an amount not exceeding one half of the price of the new shares as additional paid-in capital which is included in capital surplus.

In cases where dividend distribution of surplus is made, the lesser of an amount equal to 10% of the dividend or the excess, if any, of 25% of common stock over the total of additional paid-in capital and legal reserve must be set aside as additional paid-in capital or legal reserve. Legal reserve is included in retained earnings in the accompanying consolidated balance sheets.

Both appropriations of legal reserve and additional paid-in capital used to eliminate or reduce a deficit generally require a resolution of the shareholders' meeting.

Additional paid-in capital and legal reserve may not be distributed as dividends. All additional paid-in capital and legal reserve may be transferred to other capital surplus and retained earnings, respectively, which are potentially available for dividends.

14. Other Comprehensive Income

Other comprehensive income for the years ended March 31, 2018 and 2017 is as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|---------|---------------------------|
| | 2018 | 2017 | 2018 |
| Net unrealized gains on investment securities | | | |
| Net unrealized gains arising during the year | ¥9,134 | ¥4,152 | \$85,979 |
| Reclassification adjustments | — | (6) | — |
| Sub-total, before tax | 9,134 | 4,146 | 85,979 |
| Tax expense | (2,796) | (1,271) | (26,322) |
| Sub-total, net of tax | 6,337 | 2,875 | 59,657 |
| Net deferred gains (losses) on hedging instruments | | | |
| Net deferred gains arising during the year | 286 | 15 | 2,692 |
| Reclassification adjustments | — | — | — |
| Sub-total, before tax | 286 | 15 | 2,692 |
| Tax expense | (87) | (4) | (823) |
| Sub-total, net of tax | 198 | 10 | 1,869 |
| Foreign currency translation adjustments | | | |
| Adjustments during the year | (297) | (933) | (2,803) |
| Reclassification adjustments | 54 | — | 516 |
| Sub-total, before tax | (242) | (933) | (2,286) |
| Tax expense | — | — | — |
| Sub-total, net of tax | (242) | (933) | (2,286) |
| Remeasurements of defined benefit plans | | | |
| Adjustments during the year | (5,787) | 3,578 | (54,478) |
| Reclassification adjustments | (660) | 291 | (6,217) |
| Sub-total, before tax | (6,448) | 3,869 | (60,695) |
| Tax expense | 1,953 | (1,187) | 18,386 |
| Sub-total, net of tax | (4,494) | 2,682 | (42,308) |
| Share of other comprehensive income of associates accounted for using the equity method | | | |
| Adjustments during the year | (46) | 114 | (436) |
| Total other comprehensive income | ¥1,752 | ¥4,750 | \$16,494 |

Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

15. Share Subscription Rights

Stock option plan

The Company's shareholders have approved annual stock option plans for directors and selected employees since the year ended March 31, 1999. The options under the plans vest immediately or over three-year period with restriction on exercise up to three years after the date of grant, and have

an exercise period of seventeen years from the date on which the options become exercisable.

Options to purchase 144,700 shares of the Company were authorized and granted at an exercise price of ¥1 (\$0.01) for the year ended March 31, 2018.

A summary of stock options outstanding and exercisable as of March 31, 2018 and 2017 is as follows:

| | 2018 | | | 2017 | |
|--------------------------------------|------------------|---------------------------------|--------------|------------------|---------------------------------|
| | Number of shares | Weighted-average exercise price | | Number of shares | Weighted-average exercise price |
| | | Yen | U.S. dollars | | |
| Outstanding at the beginning of year | 457,500 | ¥1 | \$0.01 | 305,500 | ¥1 |
| Granted | 144,700 | 1 | 0.01 | 194,400 | 1 |
| Exercised | 38,600 | 1 | 0.01 | 42,400 | 1 |
| Expired (forfeited) | — | — | — | — | — |
| Outstanding at the end of year | 563,600 | 1 | 0.01 | 457,500 | 1 |
| Exercisable at the end of year | 88,800 | 1 | 0.01 | 127,400 | 1 |

Amounts expensed related to stock options

The amounts expensed related to stock options for the years ended March 31, 2018 and 2017, are as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|--|-----------------|--------|---------------------------|
| | 2018 | 2017 | 2018 |
| Selling, general and administrative expenses | ¥1,903 | ¥1,141 | \$17,921 |

Valuation method of fair value per unit of stock options

Fair value as of the grant date for stock options granted for the year ended March 31, 2018 was ¥13,158 (\$123.85) per unit, which was evaluated as follows:

(1) Valuation method used : Black-Scholes model

(2) Major underlying assumptions and estimates:

| | 13th Stock Acquisition Rights |
|-----------------------------------|-------------------------------|
| Volatility (Note 1) | 39.97% |
| Expected residual period (Note 2) | 11.5 years |
| Expected dividends (Note 3) | ¥294.5 (\$2.77) per share |
| Risk-free interest rate (Note 4) | 0.12% |

Notes: 1. Calculated based on the stock price performance for 11.5 years (from December 2005 to June 2017).
2. Calculated on the assumption that the share subscription rights would be exercised at the mid-point of the exercise period.
3. Based on the dividends paid for the years ended March 31, 2017 and 2016.
4. Based on Japanese government bond yield corresponding to the expected residual period.

(3) Method of estimating the number of vested stock options

It is not necessary to estimate the number of vested stock options as the rights to exercise stock options are vested immediately when granted.

16. Leases

Future minimum lease payments on non-cancelable operating leases are as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|---------------------|-----------------|--------|---------------------------|
| | 2018 | 2017 | 2018 |
| Due within one year | ¥ 3,772 | ¥3,554 | \$ 35,505 |
| Due over one year | 7,039 | 6,272 | 66,255 |
| Total | ¥10,811 | ¥9,827 | \$101,761 |

17. Fair Value of Financial Instruments

Policy for financial instruments

Tokyo Electron limits its fund management to short-term bank deposits and low-risk financial instruments.

Trade receivables, which consist of notes and accounts receivable, are exposed to credit risk in the event of non-performance by the counterparties. Execution and management of credit risk, maturity and receivable balance are conducted pursuant to the internal management rules for credit control. Credit risk of major customers is assessed on a regular basis.

Short-term investments consist of short term deposits and low-risk financial instruments and Tokyo Electron trade with highly-rated financial institutions to mitigate credit risks.

Investment securities consist of mainly equity interests in listed companies exposed to equity market risks. Conditions, including market prices, for these investment securities are monitored on a regular basis.

Trade payables, which consist of notes and accounts payable, mainly mature within one year. Trade payables are exposed to liquidity risks which are managed through activities such as implementing cash management plans.

See note 18 for detailed discussion on derivative financial instruments.

Fair value of financial instruments

Carrying amount and estimated fair value of financial instruments as of March 31, 2018 and 2017 are set out below. Fair value of financial instruments which is practically difficult to estimate are excluded.

| 2018: | Millions of yen | |
|---|-----------------|-----------------------------------|
| | Carrying amount | Estimated fair value ¹ |
| Assets | | |
| Cash and cash equivalents | ¥257,877 | ¥257,877 |
| Short-term investments | 116,000 | 115,966 |
| Trade notes and accounts receivable, net of allowance for doubtful accounts (¥59 million) | 159,510 | 159,510 |
| Investment securities | 32,230 | 32,230 |
| Liabilities | | |

Notes: 1. Fair value calculation of financial instruments

Cash and cash equivalents, short-term investments, trade notes and accounts receivable and trade notes and accounts payable.

The carrying amounts approximate fair value because of the short maturity of these instruments.

Investment securities

The fair values of marketable securities are based on quoted market prices.

See note 6 for further information by classification of investment securities.

Derivatives

See note 18 for detailed discussion on derivative financial instruments.

2. The following financial instruments are not included in the above as they do not have quoted market prices and therefore it is considered extremely difficult to measure their fair value.

| | Millions of yen | | Thousands of U.S. dollars |
|-----------------|----------------------------------|--------|---------------------------|
| | 2018 | 2017 | 2018 |
| | Reported amount in balance sheet | | |
| Unlisted stocks | ¥882 | ¥1,399 | \$8,309 |
| Other | 15 | 14 | 141 |
| Total | ¥897 | ¥1,414 | \$8,451 |

3. Maturities of financial assets and securities are as follows:

| 2018: | Millions of yen | |
|-------------------------------------|-----------------|-------------------------|
| | Within 1 year | After 1 through 5 years |
| Cash and cash equivalents | ¥257,877 | ¥— |

| Short-term investments | 1,091,867 | — |
| Trade notes and accounts receivable | 1,501,982 | — |

Notes to Consolidated Financial Statements

Notes to Consolidated Financial Statements

18. Derivative Financial Instruments

Tokyo Electron is subject to risk from adverse fluctuations in foreign currency exchange rates in its operating and financing activities. The Company and certain subsidiaries enter into forward foreign exchange contracts in order to hedge such risks, but do not enter into such transactions for speculative purposes. The Company implements a ratio analysis of the total cumulative cash flow fluctuations to assess effectiveness of hedging for all derivative transactions, except for transactions where the critical terms of the hedging instrument and hedged item match and the Company could conclude that changes in fair value or cash flows are expected to completely offset. Execution and management of all derivative transactions are conducted pursuant to the internal management rule.

The estimated fair values of the derivative financial instruments as of March 31, 2018 and 2017 are as follows:

1. Derivative financial instruments not designated as hedging instruments

| 2018: | Millions of yen | | |
|-----------------------|-----------------|------------|----------------|
| | Contract amount | Fair value | Gains (losses) |
| Sell U.S. dollars | ¥ 703 | ¥18 | ¥18 |
| Buy U.S. dollars | 3,639 | (19) | (19) |
| Buy Chinese yuan | 1,515 | (0) | (0) |
| Buy Taiwan dollars | 912 | 0 | 0 |
| Buy GBP | 820 | (2) | (2) |
| Buy EURO | 785 | (1) | (1) |
| Buy Singapore dollars | 706 | (2) | (2) |
| Total | ¥9,084 | ¥(7) | ¥(7) |

| 2017: | Millions of yen | | |
|------------------------|-----------------|------------|----------------|
| | Contract amount | Fair value | Gains (losses) |
| Sell U.S. dollars | ¥ 6,532 | ¥ 43 | ¥ 43 |
| Sell Korean won | 589 | (353) | (353) |
| Sell Singapore dollars | 55 | (0) | (0) |
| Buy U.S. dollars | 2,013 | 4 | 4 |
| Buy Taiwan dollars | 668 | 0 | 0 |
| Buy Chinese yuan | 404 | (0) | (0) |
| Buy EURO | 71 | (0) | (0) |
| Buy Singapore dollars | 42 | (0) | (0) |
| Total | ¥10,379 | ¥(306) | ¥(306) |

| 2018: | Thousands of U.S. dollars | | |
|-----------------------|---------------------------|------------|----------------|
| | Contract amount | Fair value | Gains (losses) |
| Sell U.S. dollars | \$ 6,622 | \$172 | \$172 |
| Buy U.S. dollars | 34,257 | (184) | (184) |
| Buy Chinese yuan | 14,265 | (4) | (4) |
| Buy Taiwan dollars | 8,591 | 8 | 8 |
| Buy GBP | 7,727 | (20) | (20) |
| Buy EURO | 7,396 | (18) | (18) |
| Buy Singapore dollars | 6,646 | (24) | (24) |
| Total | \$85,506 | \$ (70) | \$ (70) |

Note: The fair values are based on the quoted forward foreign exchange rates.

2. Derivative financial instruments designated as hedging instruments

The contract amounts of forward foreign exchange contracts, entered into to hedge future transactions and receivables and payables denominated in foreign currencies that have been translated by the corresponding contracted rates, are as follows:

| 2018: | Millions of yen | | Thousands of U.S. dollars | |
|--|-----------------|------------|---------------------------|------------|
| | Contract amount | Fair value | Contract amount | Fair value |
| Future transactions denominated in a foreign currency | | | | |
| Sell U.S. dollars | ¥11,853 | ¥335 | \$111,575 | \$3,156 |
| Buy U.S. dollars | 156 | (0) | 1,474 | (2) |
| Monetary assets and liabilities in foreign currency (Note) | | | | |
| Sell U.S. dollars | 555 | — | 5,230 | — |
| Total | ¥12,566 | ¥335 | \$118,280 | \$3,154 |

| 2017: | Millions of yen | | Contract amount | Fair value |
|--|-----------------|------------|-----------------|------------|
| | Contract amount | Fair value | | |
| Future transactions denominated in a foreign currency | | | | |
| Sell U.S. dollars | | | ¥4,117 | ¥50 |
| Sell Korean won | | | 1 | (0) |
| Buy U.S. dollars | | | 340 | (0) |
| Monetary assets and liabilities in foreign currency (Note) | | | | |
| Sell U.S. dollars | | | 130 | — |
| Buy U.S. dollars | | | 127 | — |
| Total | | | ¥4,717 | ¥49 |

Note: The fair value of these derivative financial instruments, which is based on the quoted foreign exchange rates, is included in the carrying value of hedged assets and liabilities.

19. Segment Information

General information about reportable segments

A reportable segment is a component or an aggregated component of Tokyo Electron. For each of the components, discrete financial information is available and the operating result is regularly reviewed by management to make decisions about resources to be allocated to the segment and assess its performance.

The operation of Tokyo Electron consists of segments by products and services based on business units (BUs), and Tokyo Electron identifies as a reportable segment, "semiconductor production equipment (SPE)" and "flat panel display (FPD) production equipment".

Products of the SPE segment consist of coater/developers, etch systems, deposition systems, cleaning systems used in wafer processing, wafer probers used in the wafer testing process and other semiconductor production equipment. The SPE segment principally develops, manufactures, sells such products and provide services on them.

Products of the FPD production equipment segment consist of coater/developers and etch/ash systems used in the manufacture of flat panel displays. The FPD production equipment segment principally develops, manufactures, sells such products and provide services on them.

Basis of measurement of reportable segment net sales, segment profit (loss), segment assets and other items

The accounting policies applied in each reportable segment are generally consistent with those applied for the preparation of the consolidated financial statements. Intersegment sales or transfers are determined by negotiation between the Tokyo Electron group companies considering current market prices. Assets in common use have not been allocated to each reportable segment, while costs associated with those assets have been allocated to reportable segments on a systematic basis.

Information about reportable segment net sales, segment profit (loss), segment assets and other items

Reportable segment information as of and for the years ended March 31, 2018 and 2017 is as follows:

| 2018: | Millions of yen | | | | | |
|---|--------------------------|---------|--------|------------|----------------------------|--------------|
| | Reportable Segment | | Other | Total | Eliminations and Corporate | Consolidated |

| Goodwill | 15,998 | — | 15,998 |

20. Per-Share Information

Net income per share and net assets per share are computed based on the weighted-average number of shares of common stock outstanding during each year. Net income-diluted per share is computed based on the weighted-average number of shares of common stock outstanding during each year after incorporating the dilutive potential effect of shares of common stock to be issued upon the exercise of stock options.

Dividends per share has been presented on an accruals basis and include, in each fiscal year ended March 31, dividends approved or to be approved after March 31 but applicable to the year then ended.

The basis for the calculation of net income per share for the fiscal years ended March 31, 2018 and 2017 is as follows:

| | Millions of yen | | Thousands of U.S. dollars |
|---|-----------------|----------|---------------------------|
| | 2018 | 2017 | 2018 |
| Net income (loss) per share of common stock - Basic | | | |
| Net income attributable to owners of parent | ¥204,371 | ¥115,208 | \$1,923,674 |
| Less components not pertaining to holders of common stock | — | — | — |
| Net income pertaining to holders of common stock | ¥204,371 | ¥115,208 | \$1,923,674 |
| Weighted-average number of shares of common stock outstanding (thousands) | 164,090 | 164,054 | |
| Net income (loss) per share of common stock - Diluted | | | |
| Adjustment of net income attributable to owners of parent | — | — | — |
| Increase in number of common stock (Thousands of share) | 562 | 446 | |
| Increase in number of share subscription rights (Thousands of share) | 562 | 446 | |

**Independent Auditor's Report**

To the Board of Directors of Tokyo Electron Limited:

We have audited the accompanying consolidated financial statements of Tokyo Electron Limited and its consolidated subsidiaries, which comprise the consolidated balance sheets as at March 31, 2018 and 2017, and the consolidated statements of income, comprehensive income, changes in net assets and cash flows for the years then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in Japan, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in Japan. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on our judgement, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, while the objective of the financial statement audit is not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Tokyo Electron Limited and its consolidated subsidiaries as at March 31, 2018 and 2017, and their financial performance and cash flows for the years then ended in accordance with accounting principles generally accepted in Japan.

Convenience Translation

The U.S. dollar amounts in the accompanying consolidated financial statements with respect to the year ended March 31, 2018 are presented solely for convenience. Our audit also included the translation of yen amounts into U.S. dollar amounts and, in our opinion, such translation has been made on the basis described in Note 1 to the consolidated financial statements.
