

Whether for complete cabs, plastic modules, metal working or environmental technology, the Fritzmeier Group with its 2.200 employees worldwide offers customer-specific products, as well as comprehensive development and production services for manufacturers of off- and on-highway vehicles. This extensive portfolio is made possible by our structure with its four divisions:

- CABS: All about cabs
- COMPOSITE: All about synthetics
- TECHNOLOGY: All about metalworking
- ENVIRONMENTAL TECHNOLOGY: All about sustainability

From development to final delivery, we do everything in-house. With our long experience and deep market knowledge, we are an established partner for our customers, whose products we help make safer, better performing and more economical.

In order to stay abreast of steadily rising demands, the Fritzmeier Group invests several million euros each year.

This makes it possible to reduce design times, speed up tooling, and boost process quality across all of our 15 locations in seven countries.

### CABS: All about cabs

Fritzmeier CABS is a leading system supplier for manufacturers of off-highway and utility vehicles, and makes complete cabs, system modules, and metal and composite cladding components. Our development and production operations are aligned towards the central benefits of safety, ergonomics, comfort, economy and integration capability. To best serve our customers worldwide, Fritzmeier CABS has several manufacturing locations in Europe, a joint venture in India and cooperation partners around the globe.

### COMPOSITE: All about synthetics

As one of the leading suppliers to the automotive and utility vehicle industries, Fritzmeier Composite has specialized in working with synthetics since 1971. The portfolio includes roof systems, aeropacks and interior modules for utility vehicles, car superstructures (Class A) and carbon-fibre based lightweight components. With five locations, the company is in a position to make JIS and JIT deliveries in quantity.

### TECHNOLOGY: All about metalworking

From individual parts and tools to special machines to entire production projects, since 1997 the highly qualified specialists at Fritzmeier Technology have made all-in solutions to customer order. Depending on the need, the company takes on individual project steps, or with its Competence Centres acts as an extended workbench for manufacturers. CAD/CAM design and measurement technologies are used in filling customer orders.

### ENVIRONMENTAL TECHNOLOGY: All about sustainability

The pioneering Fritzmeier Environmental Technology has succeeded in bridging precision farming, plant production and technology, and biological applications for microorganisms in B2B and B2C. The company has specialized in technology for the environment since 2009. Fritzmeier Environmental Technology develops highly innovative products that help users gain maximum economic benefit while meeting environmental concerns in every respect.

### Cab Alliance

CAB Alliance is a global network of cab specialists. Through it, Fritzmeier can offer to customers in Europe and around the world products that meet the highest quality standards. Through regular coordination on technical developments in the market and on regional differences that need to be considered for international projects, the independent companies are always in a position to offer the right solutions to their global customers.

Companies in the CAB Alliance:

- Fritzmeier in Europe (Belgium, Germany, Austria, Czech Republic, Slovakia, Romania, Moldavia)
- Ninomiya in Asia (China/Japan)
- Crenlo Engineered Cabs in North Amerika (USA)
- ETHOS in South America (Brazil)
